Influenza Surveillance Weekly Report
CDC Week 48: November 24 - 30, 2013

Influenza Activity by County, State, and National Levels

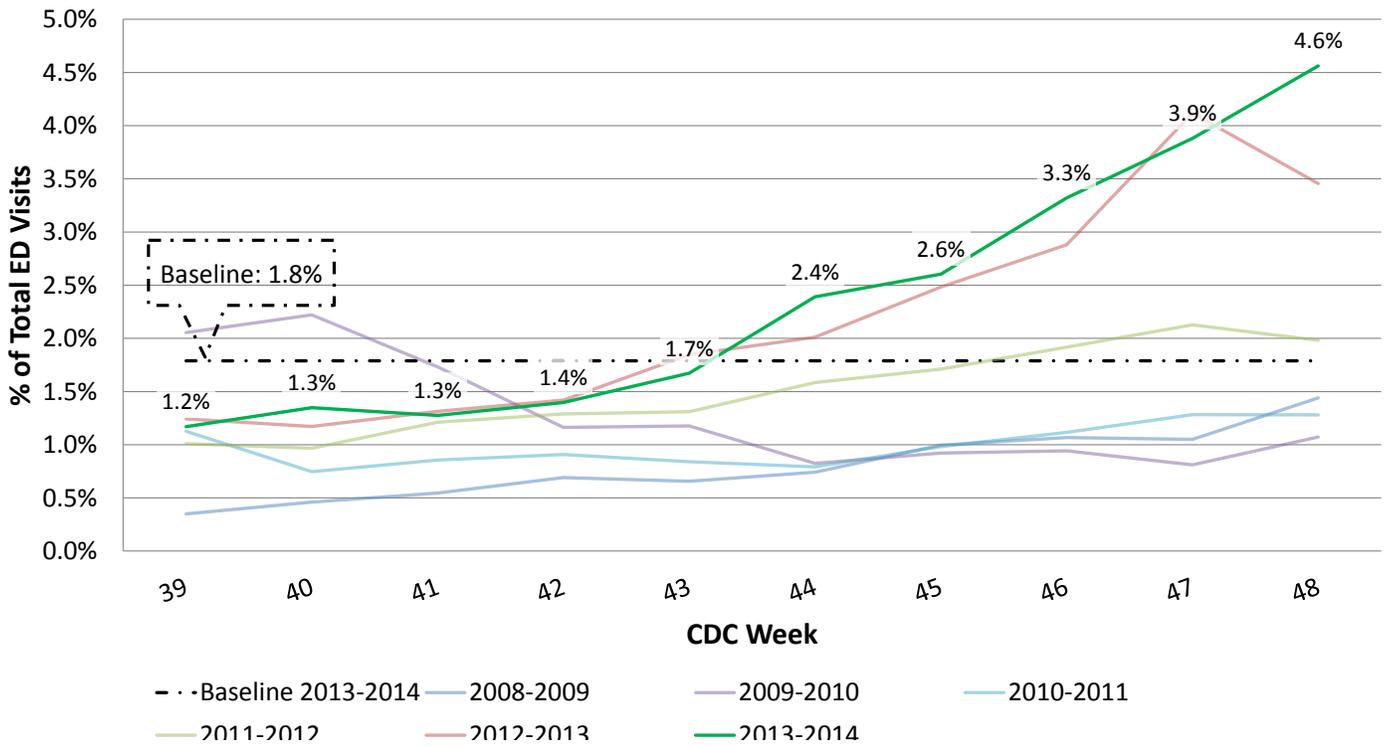

Houston/ Harris County: Week 48	Texas: Week 48	CDC: Week 48
High	High	Moderate

Highlights

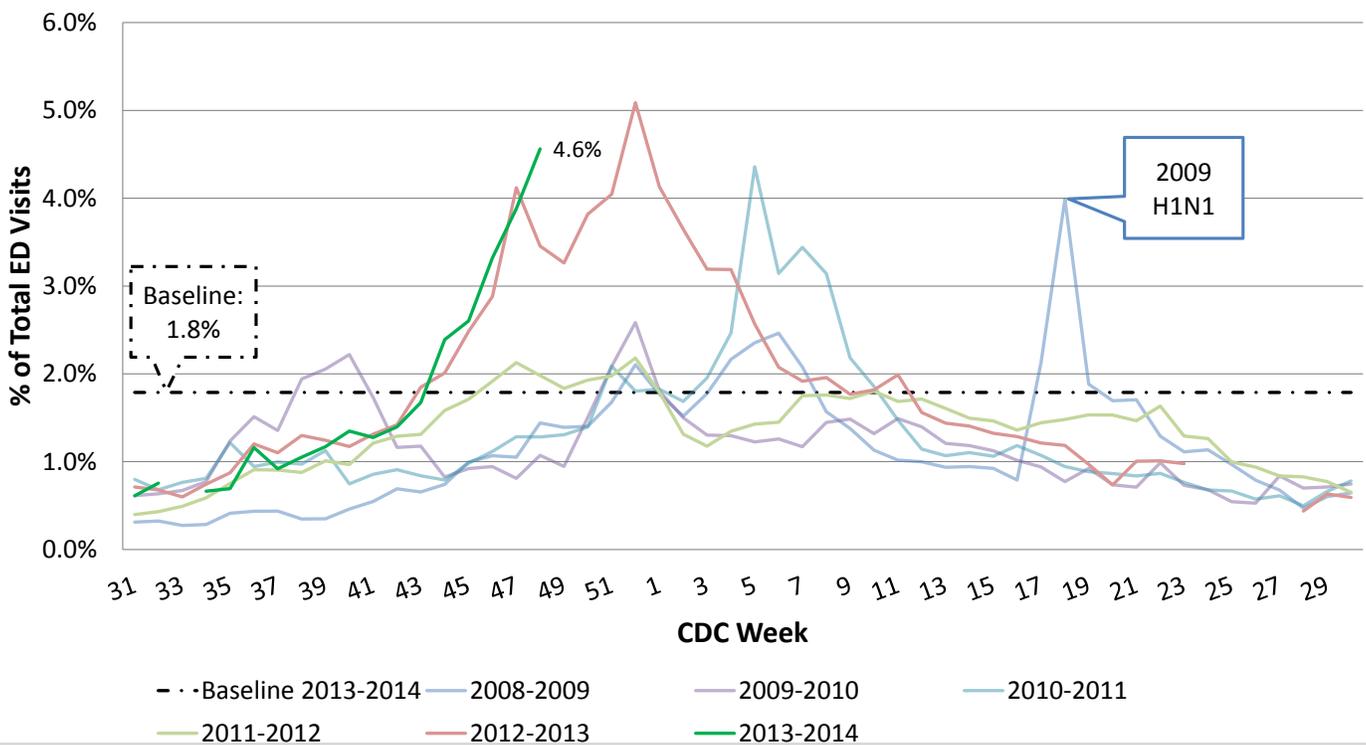

- The percentage of reported influenza-like illness (ILI) in Houston/Harris county **increased** from 3.9% in week 47 to 4.6% in week 48.
- The percentage of flu test positives in Houston **increased** from 34.3% in week 47 to 53.8% in week 48.
- During the 2013-2014 influenza season, zero (0) Houston influenza-associated pediatric deaths have been reported.
- In week 48, 13 surveillance specimens were tested by the City of Houston Bureau of Laboratory Services. The following types and number of viruses were detected in these specimens:
Influenza A H3 (0), Influenza A H1N1 (5), Influenza B (1).
- Cumulatively this season, the City of Houston Bureau of Laboratory Services has tested 190 surveillance specimens.
- The percentage of all cause absenteeism was unavailable for week 48.
- At the national level during week 48, 10.1% of specimens tested and reported to the CDC were positive for influenza. The proportion of outpatient visits for ILI (1.9%) was **below** the national baseline (2.0%) and the proportion of deaths attributed to pneumonia and influenza (5.8%) was **below** the epidemic threshold of 6.7% for week 48.

Syndromic Surveillance: 2013-2014 Influenza Season and Age Distribution

Comparison of ILI-Related ED Visits in Houston/Harris County

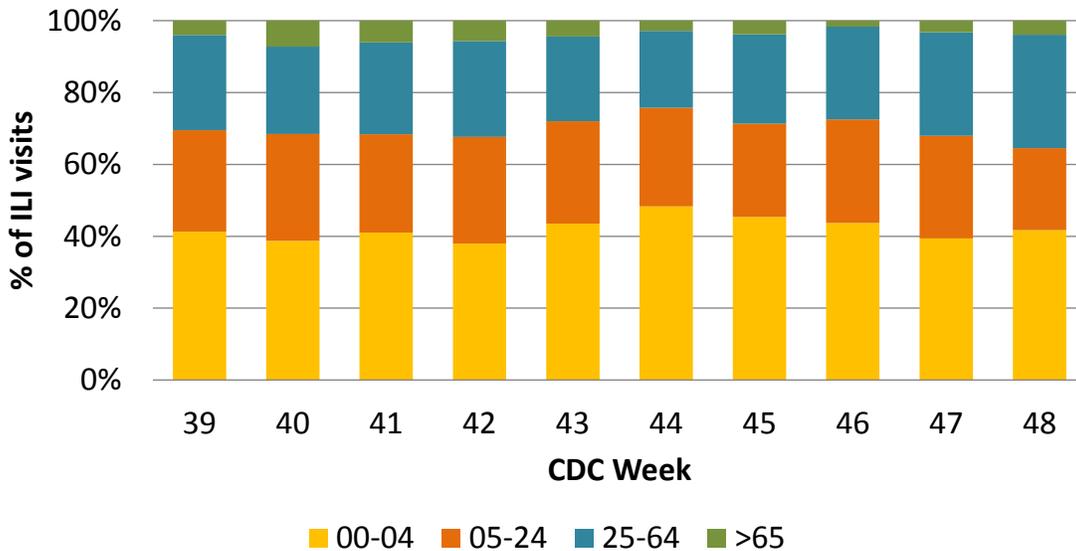

Comparison of ILI-Related ED Visits in Houston/Harris County

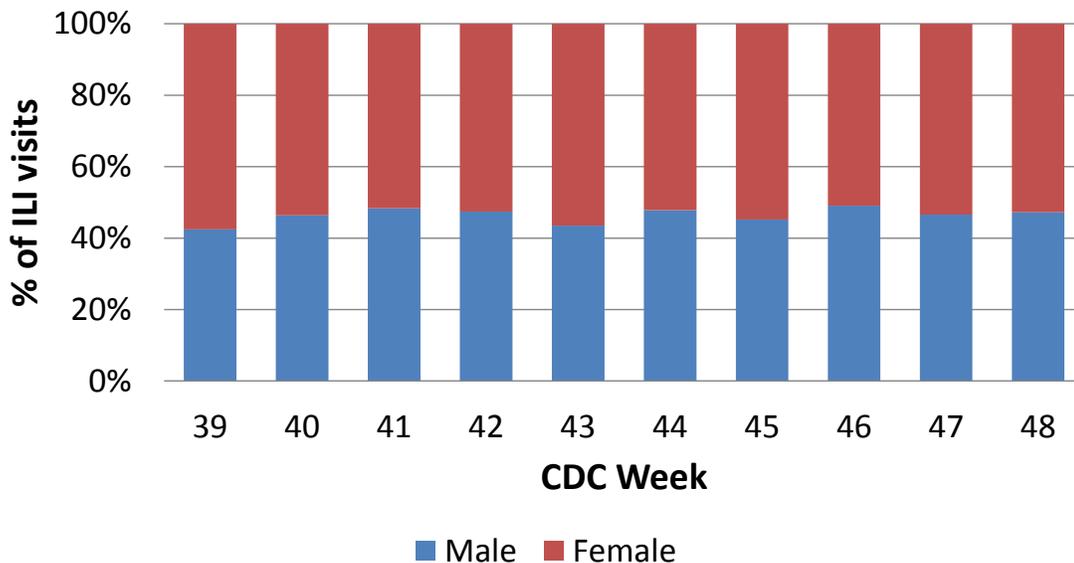

NOTE: Houston/Harris County ILI activity is assessed using information provided by surveillance participants in the Real-time Outbreak Disease Surveillance System (RODS). For week 48, 36 surveillance participants reported ILI information to Houston Department of Health and Human Services. Influenza-like illness (ILI) is defined as the mention of fever AND cough, OR fever AND sore throat, OR flu in the patient's ED chief complaint. These data do not represent laboratory confirmed cases of influenza nor do they represent all ED visits in Houston/Harris County.

Syndromic Surveillance: 2013-2014 Influenza Season and Age Distribution

ILI % by Age Groups, Houston/Harris County, 2013-2014

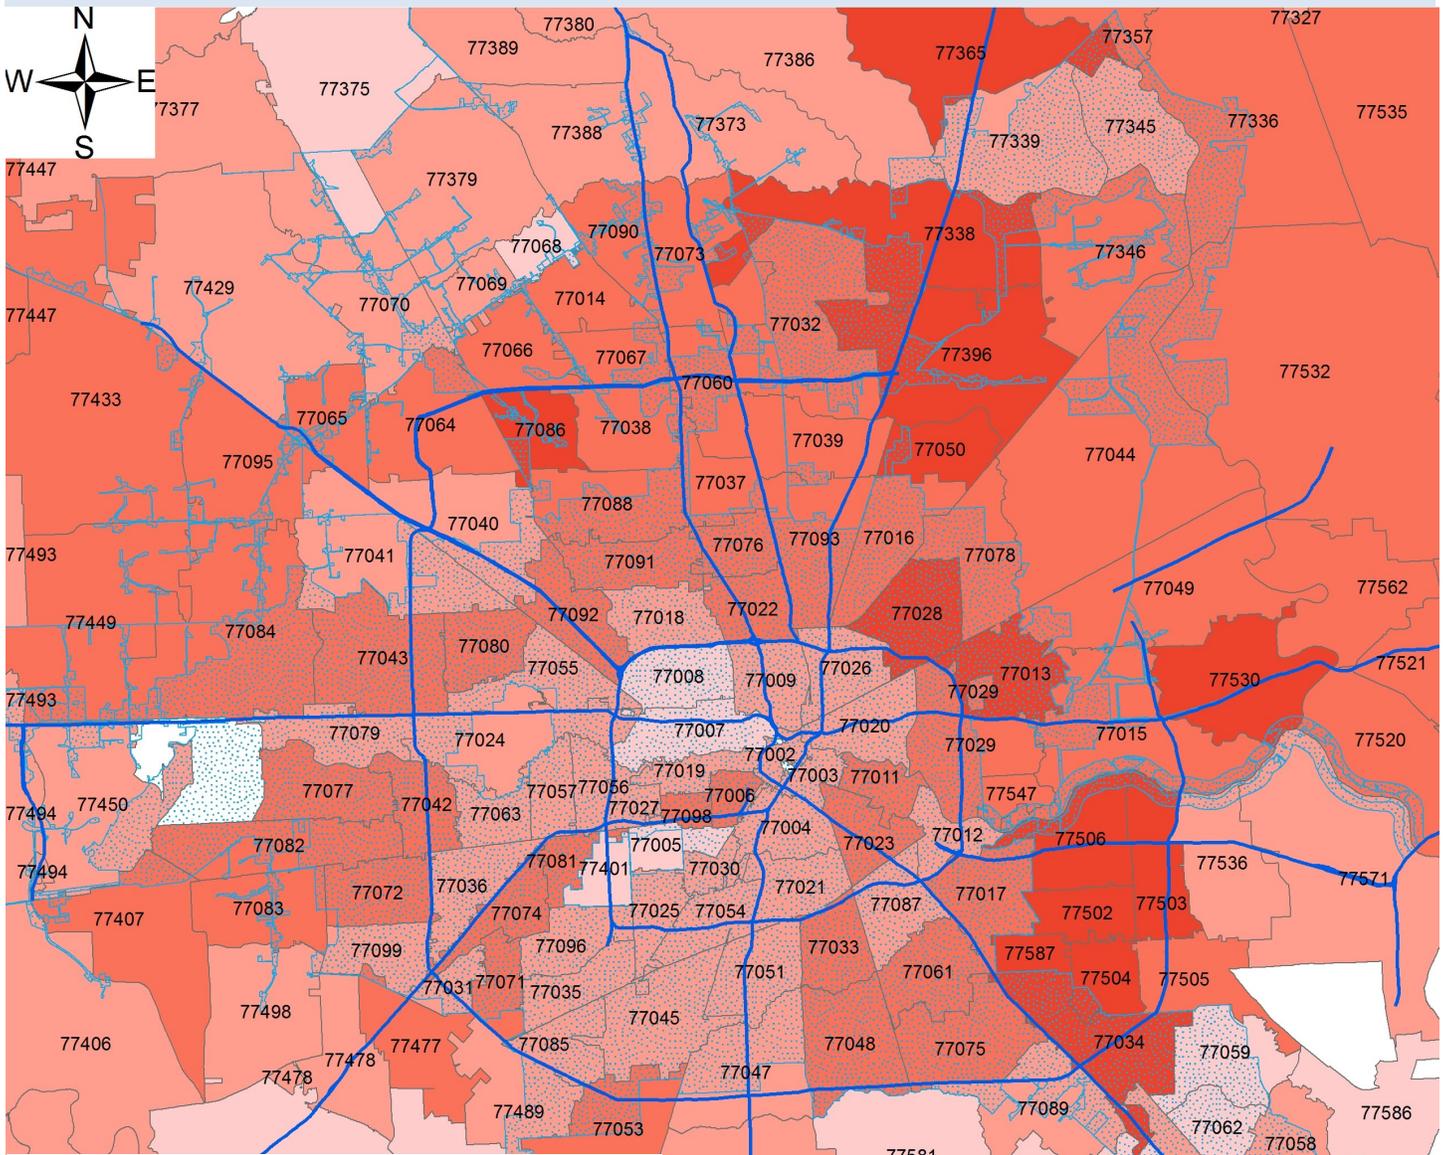

ILI % by Gender, Houston/Harris County, 2013-2014

In week 48, 4.6% of emergency department (ED) visits were due to influenza-like illness (ILI) complaints. Of the 1,277 patients presenting with ILI, the age group that recorded the most ED visits were the 0-4 year olds (41.7%).

NOTE: Houston/Harris County ILI activity is assessed using information provided by surveillance participants in the Real-time Outbreak Disease Surveillance System (RODS). For week 48, 36 surveillance participants reported ILI information to Houston Department of Health and Human Services. Influenza-like illness (ILI) is defined as the mention of fever AND cough, OR fever AND sore throat, OR flu in the patient's ED chief complaint. These data do not represent laboratory confirmed cases of influenza nor do they represent all ED visits in Houston/Harris County.

Syndromic Surveillance: Geographic Distribution Map

Legend

 City of Houston City Limit

2013-2014 % ILI of ED Visits by Zip Code

 0.1% - 1.1%

 1.2% - 2.5%

 2.6% - 4.0%

 4.1% - 6.0%

 6.1% - 12.5%

As of week 48, the zip codes that have the greatest percentage of ED visits related to ILI (6.1% or greater) are: 77415*, 77446*, 77451*, 77464*, 77533*, 77597*, 77533*.

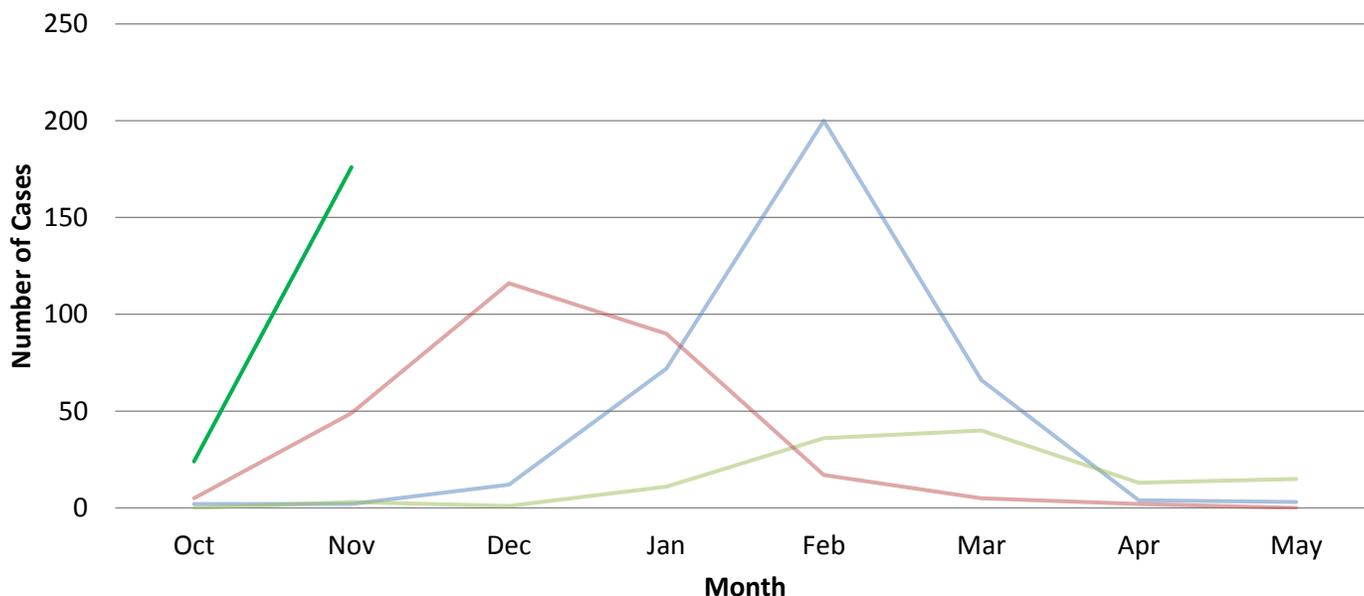

*Zip codes not displayed on map.

NOTE: Houston/Harris County ILI distribution map was created using data provided by 36 hospitals that voluntarily provide data based on chief complaints in the Real-time Outbreak Disease Surveillance System (RODS). This map reflects the percentage of ILI cases from each zip code from the total amount of cases seen in each zip code up to the current week of reporting. Influenza-like illness (ILI) is defined as the mention of fever AND cough, OR fever AND sore throat, OR flu in the patient's ED chief complaint. These data do not represent laboratory confirmed cases of influenza nor do they represent all ED visits in Houston/Harris County.

Passive Surveillance

In week 48, there were (32) additional influenza cases from the prior week. The largest proportion of patients reported with influenza in November 2013 was among those in the age group of 25 to 64 years (11 cases).

Houston Passive Influenza Reported Cases 2010-2014*

**All data are preliminary and may change as reports are received.*

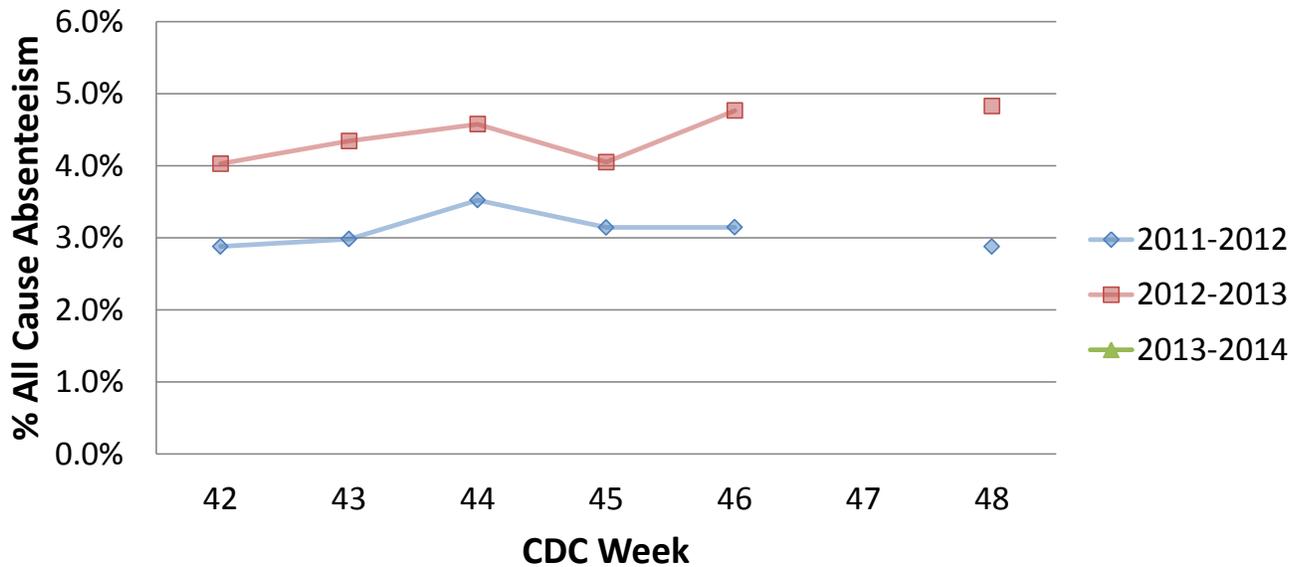

— 2010-2011 — 2011-2012 — 2012-2013 — 2013-2014

Laboratory Surveillance: Influenza Rapid Test Results, Houston

CDC Week Number	46 (Nov 10-16)	47 (Nov 17-23)	48 (Nov 24-30)
# of Influenza Tests Performed	41	35	13
% Influenza Positive	34.1%	34.3%	53.8%
# Influenza A Positive	14	11	6
% Influenza A Positive	100%	91.7%	85.7%
# Influenza B Positive	0	1	1
% Influenza B Positive	0.0%	8.3%	14.3%
# Non-differentiated Positive	0	0	0
% Non-differentiated Positive	0.0%	0.0%	0.0%

School Surveillance

Average Weekly % Absenteeism in HISD

The average daily % absenteeism for HISD schools was unavailable at the time of update.

Table 1: ILI and Influenza Cases by Type and School Type¹ per Month

	Total Cases	Lab Confirmed		Flu A	Flu B	A+B	Unclassified	Elem Schools	Middle Schools	High Schools	Multi-Level Schools
		#	%								
Aug	1	0	0.0%	0	0	0	0	1	0	0	0

Oct	45	4	8.9%	0	0	0	4	29	4	10	2
Nov	113	2	1.8%	1	0	0	1	88	16	9	0
Dec											
Jan											
Feb											
Mar											
Apr											
Total	171	6	3.5%	1	0	0	5	128	21	20	2

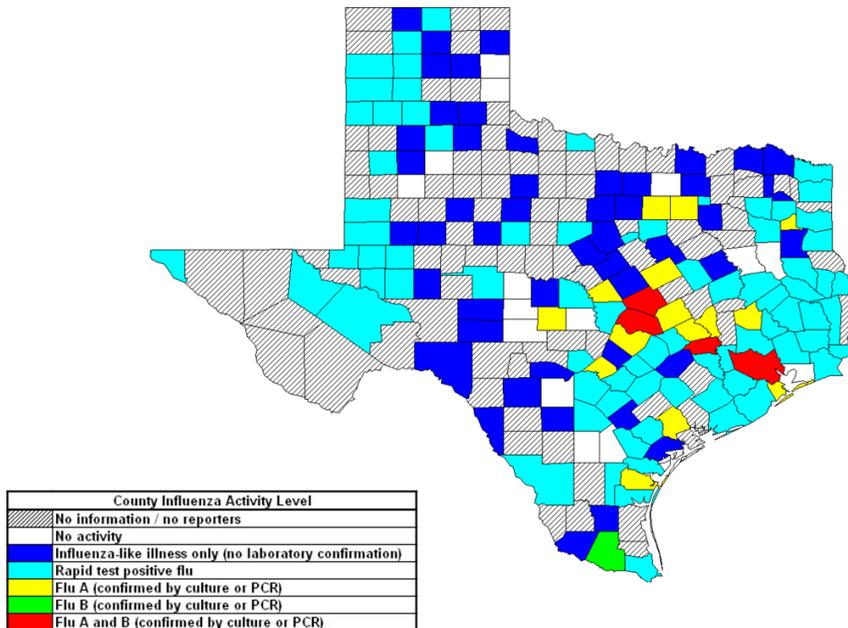

ILI cases in HISD students increased in November compared to October. There were only 2 laboratory confirmed cases seen in October and only was classified as influenza A.

NOTE: Absenteeism and student ILI is collected from 306 schools within Houston Independent School District.
¹School will be counted more than once if more than one case from the same school is reported during the report month.

Texas and National Influenza and ILI Activity

Statewide Influenza Activity Map

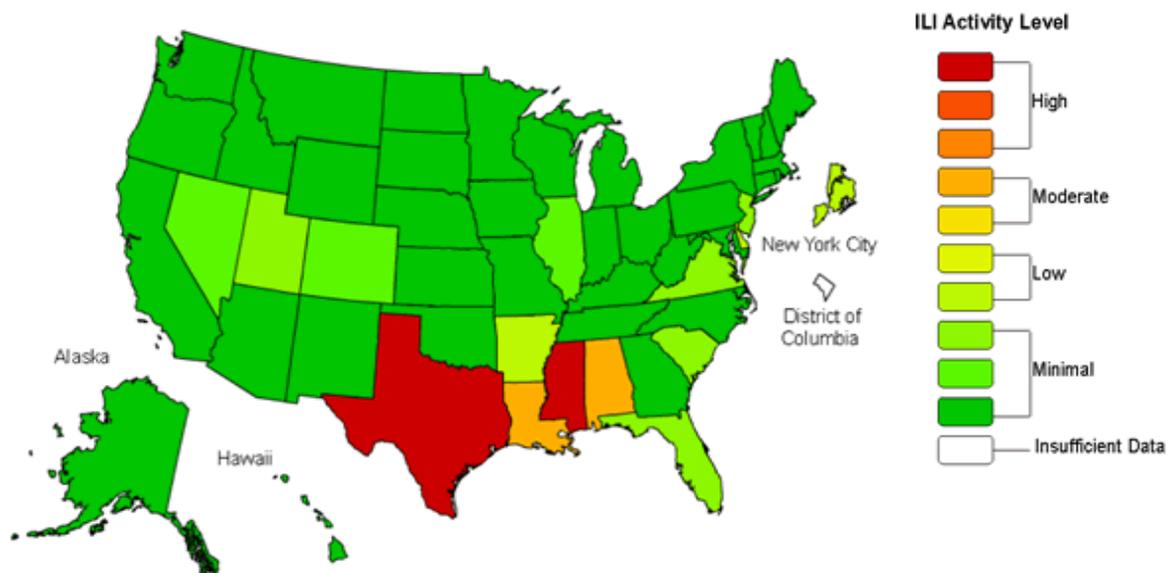

Figure 4: Texas Map Displaying the Highest Level of Influenza or ILI Activity Reported by County for the Week Ending November 30, 2013 (MMWR Week 48)

NOTE: Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity. The majority of influenza cases are not reportable by law to the Texas Department of State Health Services. This map contains data from sentinel sites and does not represent all influenza cases in the state. Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown.

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet 2013-14 Influenza Season Week 48 ending Nov 30, 2013

NOTE: Data collected in ILINet are used to produce a measure of ILI activity by state. Activity levels are based on the percent of outpatient visits in a state due to ILI and are compared to the average percent of ILI visits that occur during spring and fall weeks with little or no influenza virus circulation. This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels. Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state. <http://www.cdc.gov/flu/weekly/>

The Houston Influenza Surveillance Weekly Report is available on the Houston Department of Health and Human Services web site at:
www.houstontx.gov/health/epidemiology/flu_report.html

NOTE:

Influenza-like Illness (ILI) is defined as fever (temperature $\geq 100^{\circ}\text{F}$) plus a cough OR a sore throat, in the absence of a known cause other than influenza.

Houston ILI baselines were determined using the same method as the Centers for Disease Control and Prevention Regional ILI baselines. The baseline is developed by calculating the mean percentage ILI of ED visits during non-influenza weeks for the previous three seasons and adding two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season's total number of specimens that tested positive for influenza.
