COMMUNITY HEALTH PROFILE

Health Service Delivery Area B
(North and North-East)
2014

Houston Department of Health and Human Services
Strategic Goals of the Houston Department of Health and Human Services

- Goal 1. Protect the Community from Disease
- Goal 2. Prepare for, Respond to and Recover from Disasters
- Goal 3. Increase Opportunities for Healthy Living
- Goal 4. Give Children a Healthy Start
- Goal 5. Align Services with National Mandates and Standards
- Goal 6. Demonstrate Organizational Excellence
- Goal 7. Reduce Health Disparities

Area B and City of Houston
July 16, 2014

Welcome to the first set of Health Service Delivery Area Profiles of the Houston Department of Health and Human Services (HDHHS). HDHHS has created three health service delivery areas, comprised of contiguous Super Neighborhoods, to implement a new model of service delivery based on decentralization. Decentralization has allowed public health programs and staff to maintain a constant presence in the area, resulting in public health becoming more ‘embedded’ in the community.

We hope that the health profile for the Health Service Delivery Area B (North and North-East part of the City of Houston, hereafter referred to as Area B) will serve as a resource to the community, to our internal and external stakeholders and to partners that work with HDHHS tirelessly, to improve population health in the City of Houston. This report provides a snapshot of health conditions and the sociodemographic profile of residents living in Area B. For a list of the Super Neighborhoods included in Area B, please turn to the last page of this report.

Sincerely,

Stephen L. Williams, M.Ed., M.P.A.
Director, Houston Department of Health and Human Services
City of Houston
Profile Objectives

• To provide data to internal and external stakeholders and partnering organizations.
• To help prioritize health issues in need of evidence-based interventions.
• To provide a baseline reference for which changes in health indicators can be measured.
• To provide actionable recommendations when appropriate for planning, designing, implementing and evaluating public health programs and interventions.

Introduction

The health of individuals, communities, and jurisdictions are mainly influenced by economic and social conditions known as the social determinants of health. These conditions can shape how a person uses physical, social, and personal resources to identify and achieve goals, fulfill their needs, and manage within their environment (Raphael, 2009).

This health profile uses a health equity lens, recognizing that health is a fundamental human need and therefore, a basic human right. Health is influenced by a complex interplay between societal conditions, biological and behavioral factors. This profile presents information in many of these areas to describe a collection of factors affecting health – aligned to a social ecological model, as shown below.

It is critical to address health where people live, learn, work and play in order to give those at risk the best opportunity to live healthy productive lives.

Robert Wood Johnson Foundation
Introduction

Organization of this Profile:

The City of Houston, the fourth largest city in the U.S., lies in Harris County, which is the most populous county in Texas with a vast geographic spread of 1,703 square miles and a population of 4.1 million in 2010. Established in 1840, the City of Houston Department of Health and Human Services (HDHHS) has grown to a department of approximately 1,100 employees. HDHHS is the public health authority for the City of Houston and provides core public health services to Houston residents such as disease surveillance; air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening; family planning for the uninsured; communicable disease prevention and control; birth and death certificates; leadership during emergencies such as hurricanes; services to seniors; WIC programs; immunizations and others. HDHHS operates 11 multi-service centers, 5 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and more than 50 health and human service programs.

HDHHS provides services in three health service delivery areas (referred to as Areas A, B, and C). These areas were designated in 2010 and are aggregations of contiguous Super Neighborhoods (which are themselves aggregations of residential subdivisions, and hereinafter referred to simply as “neighborhoods”) used to decentralize department services and make health service delivery more manageable. This profile presents a quantitative snapshot of the most recently available data on selected health indicators for Area B. This profile focuses on socio-demographic conditions, access and utilization of care, prevalence and incidence of certain diseases, behaviors that increase the risk of poor health, and quality of life.

The information presented synthesizes the most recently available data from multiple sources. Data on the above areas is organized in sections. Each section is followed by recommendations for action to improve health outcomes in Area B.

Technical Notes:

• Presenting average indicators, such as average income, at the area level is likely to mask the true picture of conditions in some neighborhoods because each area combines lower and higher income neighborhoods. The socio-economic data presented here are derived from the American Community Survey (ACS) five-year estimates (2007-2011) with some supporting information pulled from the U.S. Census 2010.

• The City of Houston, Harris County, and State of Texas indicators are used as reference groups to compare data. The Behavioral Risk Factor Surveillance System (BRFSS) data is compared to the City of Houston as a reference and Health of Houston (HHS) data is compared to Harris County.

• Much of the data comes from complex and weighted cross-sectional survey data, thus, crude point prevalence rates are presented in many cases.
### Socioeconomic Conditions and Access to Care

- Demographics
- Household Characteristics
- Poverty
- Income and Benefits
- Education
- Employment Status and Occupational Categories
- Health Insurance
- Medicaid
- Access to Care
The age pyramids for Area B and the City of Houston are represented as a horizontal bar graph that shows the percentage of males in each age group on the left side and the percentages of females on the right. The age categories are grouped into five year increments, with the youngest in the population located at the bottom (U.S. Census Bureau, 2010).

The age distribution pyramids show that both Area B and the City have high proportion of young people. More than half of residents in Area B are under the age of 40. The highest percentage of residents fall within the 0 to 9 age groups, representing over 80,000 residents. Compared to the city of Houston, Area B has higher proportion of residents under 20 years old.
Demographics and Household Characteristics

The total population of Area B is 478,300 and about half (approximately 220,018 residents) are of Hispanic descent.

The total population in the City of Houston is 2,099,451. Hispanics comprise the largest racial/ethnic group in the City, representing approximately 44 percent of the population.

English is the primary language spoken at home for more than 50 percent of households in Area B and the City of Houston. The second most frequently spoken language is Spanish or Spanish Creole.

A family household is defined as one which is maintained by a householder and includes individuals related by birth, marriage, or adoption. It may also include unrelated individuals living in the home (U.S. Census Bureau, 2012a). A non-family household refers to a householder living alone or sharing the home with non-relatives only (U.S. Census Bureau, 2012b). Similar to the City of Houston, the majority of households in Area B either contain married couple families (41.8%) or are non-family households (30.6%).

In terms of marital status, Area B is very similar to Houston as a whole. The majority of residents in Area B are either currently married (43.0%) or have never been married (36.7%). Another 14.3 percent of the residents are either divorced or separated and 6 percent are widowed.

Data Source: U.S. Census Bureau, 2010
Poverty

United States (U.S.) Census Bureau uses a set of poverty thresholds to estimate the annual income needed for a given family to meet basic needs. The poverty threshold or poverty line, varies by family size and composition. A family is considered poor if their annual income is less than the poverty threshold (U.S. Census Bureau, 2012c). Approximately 25 percent of the population in Area B live below the poverty line.

### Poverty By Race/Ethnicity (Rate per 1,000 Population)

<table>
<thead>
<tr>

</tbody>
</table>

* Note: Asian & Other is the combination of the following race groups, regardless of Hispanic or Latino origin:
- Asian Alone
- American Indian & Alaska Native Alone
- Native Hawaiian & Other Pacific Islander Alone
- Some Other Race Alone
- Two or More Races

Area B has higher poverty rate than the City and the State. The poverty rate among minorities in Houston is higher than that of Texas. In Area B, the rates of poverty are more three times higher for minorities than for White non-Hispanics.

Area B has a higher poverty rates across all racial/ethnic groups compared to the same groups in Houston as a whole. Only White, Non-Hispanics in Area B a have lower poverty rate compared to the same group in the state of Texas. Blacks have the highest poverty rate (322.8 per 1,000 population).

### Ratio of Income to Poverty Level in Area B

Many residents in Area B have annual earnings at least two hundred percent or more above the poverty line (47.7%). The average household income for Area B is $57,188 compared to $70,029 in the City of Houston. The average household income for the area should be interpreted with caution because a fourth of the residents in Area B (approximately 120,000) live below the poverty line.

Neighborhoods where at least 20 percent of residents are living below the poverty level are considered impoverished communities (U.S. Census Bureau, 2011). Of the 24 neighborhoods in Area B, 14 are considered impoverished. Two of these neighborhoods (Greater Fifth Ward and Settegast) are considered to be extremely impoverished, where at least 40 percent of residents live below the poverty line (U.S. Census Bureau, ACS, 2007-2011).

Data Source: American Community Survey (ACS) 2007-2011
Income and Benefits

According to the U.S. poverty guidelines for 2013, the annual income for a family of four living at 100 percent of the federal poverty threshold is $23,550 (U.S. Department of Health and Human Services, 2013).

Income Among Households (In 2011 Inflation-Adjusted Dollars)

<table>
<thead>
<tr>
<th>Income Range</th>

<tr>
<td>$75,000 and above</td>
<td>14.3%</td>
<td>8.0%</td>
</tr>
</tbody>
</table>

In Area B, a higher proportion of residents earned less than $15,000 annually than those in the City of Houston. This represents over 18.6% of the population in Area B. However, the annual income of the majority of residents in Area B exceeds the poverty threshold.

Households Receiving Government Benefits

<table>
<thead>
<tr>
<th>Benefit Type</th>
<th>Area B</th>
<th>City of Houston</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSI and/or cash public assistance</td>
<td>8.3%</td>
<td>5.5%</td>
</tr>
<tr>
<td>Food Stamp/SNAP benefits in the past 12 months</td>
<td>15.7%</td>
<td>11.4%</td>
</tr>
</tbody>
</table>

Compared to the City of Houston, higher proportions of households in Area B received benefits for Supplemental Security Income (SSI) /Cash Public Assistance and Food Stamp/ Supplemental Nutrition Assistance Program (SNAP).

Note: Households are counted twice if they receive both Supplemental Security Income (SSI) and cash public assistance.

Data Source: ACS, 2007-2011
“Educational attainment refers to the highest level of education an individual has completed” (U.S. Census Bureau, 2013). The Center for Disease Control and Prevention (CDC, 2011a) Health Disparities and Inequalities Report found striking disparities exist in education and poverty among the U.S. adult population. Analysis on low income families showed that non-high school graduates earned less than others living below the federal poverty level (Poverty Income Ratio <100%) (CDC, 2011a).

Among the 14 neighborhoods that are considered impoverished in Area B, up to 60 percent of the adult population (25 and over) have less than a high school education. Of the neighborhoods in Area B, Eastex—Jensen, Greater Fifth Ward and Northside/Northline had the highest proportions of adults who did not finish high school (approximately 58 percent).

In Area B, approximately one-third of adults (25 and older) have less than high school education, compared to one-fourth of adults in City of Houston. Less than one-sixth of adults have a bachelor’s degree or higher in Area B, which is lower than the corresponding percent of the City.

In Area B, a slightly higher proportion of males than females (age 25 and older) have not completed a high school education.

Data Source: ACS, 2007-2011
### Education

#### Educational Attainment for Area B (By Poverty Status)

<table>
<thead>
<tr>
<th>Education Level</th>
<th>Income in the Past 12 Months</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Below Poverty</td>
<td>At or Above Poverty</td>
<td></td>
</tr>
<tr>
<td>Less than High School Graduate</td>
<td>52.7%</td>
<td>29.3%</td>
<td></td>
</tr>
<tr>
<td>High School Graduate or Equivalent</td>
<td>30.5%</td>
<td>27.7%</td>
<td></td>
</tr>
<tr>
<td>Some College, Associate’s Degree</td>
<td>15.5%</td>
<td>23.6%</td>
<td></td>
</tr>
<tr>
<td>Bachelor’s Degree or Higher</td>
<td>3.9%</td>
<td>19.4%</td>
<td></td>
</tr>
</tbody>
</table>

Note: The estimates above may not add to 100% because of the difference between the population for whom poverty status is known and the total population.

When comparing educational attainment by income status for those living in poverty, the largest difference is found between non-high school graduates and those with a bachelor’s degree or higher. In Area B, of those living below the poverty line, more than half have not completed high school (52.7%) and just about four percent have earned a bachelor’s degree or higher. Among those living at or above the poverty line, educational attainment is more evenly divided between the educational attainment categories.

#### School Enrollment for Area B

Of those currently enrolled in school in Area B, about one-sixth (16.6%) have completed high school and are enrolled in higher education. In the City of Houston, 23.2% of residents are enrolled in college and professional school.

Data Source: ACS, 2007-2011
Employment Status and Occupational Categories

Employment Status for Area B

- More than half the residents (age 16 and above) in Area B are employed and 22.3 percent of the employed residents work in management, business, science, or art positions compared to 32.5 percent in the City of Houston.

- Residents (age 16 and above) in Area B who are unemployed or not considered part of the work force comprise 43.0 percent of the population compared to 37.6 percent in the City of Houston.

- Compared to one-fourth of the employed population (25.6%) in the City, over a third of Area B employed residents (34.9%) hold positions in physically laborious or hazardous occupations such as construction, maintenance, natural resources, production and material moving.

Occupation Types

Area B

- Management, business, science, and art occupations: 22.3%
- Service occupations: 17.8%
- Sales and office occupations: 19.2%
- Natural resources, construction, and maintenance occupations: 17.1%
- Production, transportation, and material moving occupations: 23.7%

City of Houston

- Management, business, science, and art occupations: 32.5%
- Service occupations: 12.8%
- Sales and office occupations: 23.3%
- Natural resources, construction, and maintenance occupations: 18.6%
- Production, transportation, and material moving occupations: 12.8%

Data Source: ACS, 2007-2011
Health Insurance

Type of Health Insurance

Starting in 2014, the Affordable Care Act started providing more affordable coverage, which is expected to result in increased access to care by decreasing health care cost, by offering free recommended preventive services, and by providing more health insurance options. (The White House, n.d.)

Note: Other public health insurance types do not include Harris Health Financial Assistance Program (previously called Gold card) recipients.

A smaller proportion of residents in Area B have private health insurance compared to Harris County (35.9% vs. 50.3%). More than 27 percent are on Medicare or some other public insurance option, and over one-third of residents in Area B are uninsured. The most common reason for residents in both Area B and Harris County being uninsured is the insurance cost.

Reasons for not being Insured

Data Source: HHS, 2010
Medicaid

Medicaid Enrollees 65 years and Older

In both Area B and Harris County, approximately one-fifth of all adults, 65 years and older were enrolled in Medicaid during the 2012 state fiscal year (SFY).

For those 65 years and older, Hispanics in Area B and Harris County have the highest rate of Medicaid enrollment followed by Blacks. The lowest rates are among Whites. Because of their age, these enrollees are also eligible for Medicare.

For each racial/ethnic group, the rate of enrollment is higher in Harris County than in Area B, except among Hispanics, where the rate of enrollment is slightly higher in Area B (310.6 per 1,000 individuals, compared to 309.7 in Harris County).

Medicaid Enrollment for 65 years and Older By Race/Ethnicity
(Rates per 1,000 Individuals)

Data Source: Office of Strategic Decision Support, Health and Human Services Commission, SFY 2012
Access to Care

Factors such as having a regular medical care and health insurance coverage affect the likelihood of accessing preventive care (CDC, 1998). According to Healthy People 2020 (2013a), these factors contribute to having better health outcomes, fewer disparities and lower associated healthcare cost.

More than a third (37.6%) residents in Area B were not currently receiving care by a personal doctor or a health care provider as compared with 30.9% in Harris County. In Harris County, higher proportions of Hispanics reported lack of personal doctor as compared with other racial/ethnic groups. For those that did access a health care provider, more than 70.0 percent spent thirty minutes or less traveling to a provider location.

More than a third of (37.6%) residents in Area B were not currently receiving care by a personal doctor or a health care provider as compared with 30.9% in Harris County. In Harris County, higher proportions of Hispanics reported lack of personal doctor as compared with other racial/ethnic groups. For those that did access a health care provider, more than 70.0 percent spent thirty minutes or less traveling to a provider location.

Travel Time to Place of Care

Data Source: HHS, 2010
Summary and Recommendations

Summary

- A majority of the 478,300 residents in Area B are relatively young, about half are under the age of 40. Nearly half of the population in Area B are of Hispanic or Latino descent.

- The average household income is $57,188 and 22.3 percent of residents hold management, business, science, and art positions. However, aggregating higher income areas with many impoverished areas results in an inflated mean household income, which may mask patterns of material deprivation within some Area B neighborhoods.

- Forty-three percent of residents are either unemployed or not considered part of the work force, and 18.6 percent earned less than $15,000 annually.

- Approximately one-third of residents in Area B have not graduated high school (33.7%). Among those living below poverty line, more than half have not completed high school (52.7%).

- Poverty distribution shows that the rate of poverty is highest amongst Blacks, followed by Hispanics.

- More than one-third of the residents have private health insurance coverage (35.9%), approximately 28 percent are on Medicare or some other public insurance option, and one-third are uninsured.

Recommendations

At the Individual Level:

- Education, skill building and job training are some of the primary areas that need to be emphasized.

- Families with children need to reiterate the importance of education and provide long term engagement and support for their children’s schooling.

- Any intervention developed should be culturally relevant to meet the diverse needs in Area B.

At the Organizational Level:

- Culturally relevant and evidence-based programs aimed at poverty reduction, enhancement of income and increasing education levels are needed in neighborhoods where at least 20 percent of residents live below the FPL.

- Active engagement of local political representatives and community leaders to work towards improving socio-economic conditions should be sought.

- Vigorous efforts to disseminate accurate information about the Affordable Care Act (ACA) in the community by local stakeholders should be promoted. Assistance in ACA enrollment for obtaining medical coverage for uninsured residents by local organizations should be provided.

At the Policy Level:

- Engagement, continual discussion, identification of sustainable solutions and implementation of evidence-based strategies to reduce inequality and improve quality of life among residents of Area B need to be conducted.

- Advocate to protect resources for low income individuals and impoverished areas.
Health Conditions and Quality of Life

- Cardiovascular Diseases
- High Blood Pressure
- Overweight and Obesity
- Diabetes
- Sexually Transmitted Diseases
- Communicable Diseases
- Mental Health
- Quality of Life
Cardiovascular Diseases

Cardiovascular diseases, also called heart diseases include heart attack, stroke, heart failure and coronary heart disease. Coronary heart disease (CHD) is a result of coronary artery disease (CAD). In the U.S., CAD is the most common type of heart disease and the leading cause of death (CDC, 2013a). CHD occurs when plaque builds up in the coronary arteries, which supply oxygen-rich blood to the heart. A blockage in these arteries can lead to a heart attack (American Heart Association, 2013).

Stroke is the fourth leading cause of death in the U.S. and occurs when a blood clot or hemorrhage interrupts the blood supply to the brain (National Stroke Association, 2013).

Has a doctor, nurse or other health professional EVER told you that you had coronary heart disease, stroke, heart attack?

According to CDC, coronary heart disease kills more than 385,000 people annually. Every year about 715,000 Americans have a heart attack, and stroke kills 130,000 Americans annually. (CDC, 2014a)

Higher proportions of residents in Area B reported having coronary heart disease (5.3%) and stroke (4.1%) than residents in the City of Houston and the residents in Harris County. However, the proportion of residents in Area B that had a heart attack (3.1%) was comparable to Houston and Harris County.

The figure on the left shows out-of-hospital cardiac arrest rate for census tracts in Houston area. The study indicated that individuals at highest risk of out-of-hospital cardiac arrest were found to be older African Americans of low income or education level. (Raun et al, 2013)

The cardiovascular disease data presented above may have been underestimated with wider confidence intervals as compared to other national statistics such as BRFSS.
High Blood Pressure

High blood pressure (HBP) occurs when the force of the blood against artery walls is high (CDC, 2012e). High cholesterol results from fat deposits in blood vessels that reduce blood flow in the arteries. “Approximately 1 out of every 6 American adults has high blood cholesterol (CDC, 2012c).” HBP is considered the “silent killer” because just as with high cholesterol, there are often no warning signs or symptoms (CDC, 2012e).

An estimated 68 million adults in the U.S. have high blood pressure. A normal blood pressure level for adults is 120/80 mmHg (CDC, 2013b).

A higher proportion of adults in Area B are diagnosed with high blood pressure as compared to the City and County. The City and County rates are comparable with national statistics. According to CDC, about one-third of adults in the U.S. have high blood pressure and only about half (46.5%) of people with high blood pressure have their condition under control. (CDC, 2014b)

Taking Medication for High Blood Pressure

<table>
<thead>
<tr>
<th>Area B</th>
<th>City of Houston</th>
<th>Harris County</th>
</tr>
</thead>
<tbody>
<tr>
<td>29.3%</td>
<td>28.2%</td>
<td>26.0%</td>
</tr>
<tr>
<td>70.7%</td>
<td>70.9%</td>
<td>73.1%</td>
</tr>
</tbody>
</table>

High blood pressure typically develops over many years, and it affects nearly everyone eventually. Fortunately, high blood pressure can be detected and controlled (Mayo Clinic, 2014). The proportion of residents with diagnosed high blood pressure in Area B that reported taking medication (70.7%) was comparable with the City of Houston (70.9%), but slightly lower than that of Harris County (73.1%). However, the proportion of those who reported not taking medication may be taking other measures to control their high blood pressure.

Hispanic populations have low control rates for high blood pressure, a major risk factor for heart disease and stroke. Also, they have high prevalence of high blood cholesterol, and their diets often are high in salt and saturated fats (CDC, 2014c).

Data Source: HHS, 2010
Overweight and Obesity

Overweight and obesity are terms used to define ranges of weight that are greater than what is considered healthy for a given person's height (CDC, 2012f). Based on this information, a person's body mass index (BMI) typically provides a reliable indication of body fatness (CDC, 2012f).

For adults, BMI ranging between 25.0 and 29.9 is considered overweight. A BMI greater than or equal to 30.0 is considered obese. (CDC, 2012f).

Obesity among American adults is highly prevalent and steadily rising. It increases an individual's risk for health conditions such as diabetes, heart disease, stroke, high blood pressure, certain cancers, depression and a host of other conditions. It is also associated with increased medical cost to the health care system. From 2009-2010, more than two-thirds of U.S. men and women (68.8%) were considered overweight or obese (National Institute of Diabetes and Digestive and Kidney Diseases, 2013), which is slightly higher than Harris County (66.3%).

In Area B, 45.9 percent of those 18 to 44 years old were considered obese compared to 28.0 percent in the City of Houston. A higher proportion of those 45 to 64 years old were considered obese in Area B (50.9%) than the same age in the City of Houston (32.7%). However, a lower proportion of those 65 years and older were obese in Area B than those in the City.

Data Source: BRFSS, 2008-2010
Overweight and Obesity

The American Medical Association (2013) declared obesity a disease in June, 2013. Although controversial, this has far reaching implications.

- Defining obesity as a disease will help highlight the epidemic in the U.S. and spur health insurers to take greater responsibility for treating obesity.
- It means that the stigma associated with obesity would likely be reduced. It implies that obesity is not simply a result of eating too much and exercising too little. There are factors that are out of a person’s control that can perpetuate obesity in certain populations.
- However, it shifts the focus away from prevention and drives obesity to a narrower medical model.

Overweight and Obesity by Race / Ethnicity

Hispanics had higher proportions of obesity in Area B as compared with Blacks and Whites. However, higher proportion of Blacks were overweight in Area B. In both Area B and the City of Houston, higher proportions of Whites were of normal weight during 2008 to 2010.

Data Source: BRFSS, 2008-2010
Diabetes

Diabetes can occur when blood glucose levels are above normal. High blood glucose levels can lead to serious health problems, such as cardiovascular disease and kidney failure (CDC, 2012a). Diabetes is the seventh leading cause of death in the U.S. (CDC, 2012d). Diabetic adults are two to four times more likely to die of heart disease or experience a stroke than non-diabetics. About 70 percent of people with diabetes have high blood pressure, which is a risk factor for cardiovascular disease (CDC, 2012a).

![Diabetes Diagnosis by Health Professional (By Race/Ethnicity)](chart)

Higher proportions of White non-Hispanic, Black non-Hispanics and Hispanics in Area B were told by a healthcare professional that they had diabetes compared to Harris County average for those racial and ethnic groups.

Type I Diabetes usually occurs in childhood or young adults. It develops when a person is insulin deficient and the body no longer produces insulin (National Diabetes Information Clearinghouse, 2012). Type II Diabetes develops when a person is insulin resistant, and does not make enough insulin to keep the body’s blood glucose levels normal. Type II Diabetes is the most common type of diabetes and can occur at any age (National Diabetes Information Clearinghouse, 2012).

Pre-diabetics should also take preventive measures to avoid developing diabetes, as their blood sugar levels are above normal, but below the classification for diabetes (National Diabetes Information Clearinghouse, 2012).

Data Source: HHS, 2010
**Sexually Transmitted Diseases**

Chlamydia, gonorrhea, and syphilis are sexually transmitted diseases (STDs) that affect both men and women of all age groups. Chlamydia is the most commonly reported STD in the U.S. and women are more prone to infection than men. When chlamydia is untreated it can lead to serious health problems, including infertility (CDC, 2013d). Gonorrhea can also impact a woman’s ability to have children and has the possibility of spreading to the eyes of newborns during birth from their infected mother (Mayo Clinic, 2013a). Syphilis can spread by sexual contact from person to person via skin or mucous membrane contact (Mayo Clinic, 2013b). Rates of syphilis in the U.S. have been rising since 2000, particularly among men who have sex with men (MSM) (CDC, 2013e).

Timely diagnosis and treatment of STDs is recommended to help prevent negative long-term consequences such as the transmission of HIV. Individuals with STDs are at least two to three times more likely to acquire HIV through sexual contact than those uninfected (CDC, 2010).

**Sexually Transmitted Diseases (Rate per 100,000 Population)**

Similar to Houston/Harris County, chlamydia is the most commonly reported STD among women in Area B. In 2012, the rate of chlamydia for females in Area B was 1,314.7 per 100,000 population compared to 824.1 per 100,000 population in Houston/Harris County.

For both males and females, rates of chlamydia, gonorrhea and syphilis are higher in Area B as compared to Houston/ Harris County. Research shows that 63 percent of the reported cases of syphilis are among men who have sex with men (MSM) as per CDC (2013e). In Area B, for every female that has syphilis there are about two males with syphilis, and in Houston/Harris County the ratio is about 1:5.

Data Source: Bureau of HIV/STD Prevention, HDHHS, 2012
HIV/AIDS

Human Immunodeficiency Virus (HIV) is a lifelong illness that can be transmitted sexually, through contact with infected blood, or from mother to child during pregnancy, childbirth or breast-feeding (Mayo Clinic, 2012).

The virus gradually destroys specific immune system cells, and over time the body becomes unable to fight off infections and diseases (Mayo Clinic, 2012). When this occurs, the HIV infection transitions to acquired immunodeficiency syndrome (AIDS).

Treatment

Antiretroviral therapy (ART) is used to slow the progression of the disease and helps lower the chance of spreading the infection to others. Today, HIV is considered a chronic condition and a nearly normal life expectancy can be expected for those diagnosed with HIV and treated before the disease is far advanced (CDC, 2013g).

In 2010, the rate of people living with HIV was higher in Area B than Harris County (762.4 per 100,000 population vs. 484.3 per 100,000 population). During 2011, the rate of newly diagnosed cases of HIV infections was 56.0 per 100,000 population in Area B and 30.0 per 100,000 population in Harris County.

Data Source: Bureau of Epidemiology/HDHHS, 2010-2011
Communicable Diseases

Five Year Average Rate of Communicable Diseases (per 100,000 population)

Note: Disease rates include all Texas notifiable conditions reported between 2008-2012, with the exception of HIV, STDs, and Tuberculosis (TB).

Communicable diseases, also known as infectious or transmissible diseases, can spread from person-to-person, animal to person, or through vectors such as contaminated water, food, insects, or infected objects (Wisconsin Department of Health Services, 2013).

Diseases such as measles, mumps, rubella, pertussis, influenza, and certain forms of hepatitis can be prevented through immunization. Most food borne illnesses can be prevented through proper food handling and cooking.

Area B had communicable disease rates similar to those found in the City of Houston for vectorborne illnesses (an illness caused by an infectious microbe that is transmitted to people by bloodsucking insects), Hepatitis, and vaccine preventable diseases. Foodborne illnesses were the most commonly reported communicable diseases in Houston as a whole. The rate for general communicable disease was higher in Area B (20.3 per 100,000 population) than the City of Houston (15.9 per 100,000 population) during 2008-2012.

Source: Bureau of Epidemiology/HDHHS, 2008-2012
Mental Health

Mental health is a state of well-being and is an essential component of health (World Health Organization (WHO, 2013)). Several social, psychological, and biological factors determine mental health status (WHO, 2013). Social determinants that support good mental health include adequate housing, safe neighborhoods, equitable jobs and wages, quality education, and equity in access to quality health care (CDC, 2011b).

A consistent association is found between mental health and physical health. Mental illness can affect the occurrence, treatment, and course of many chronic diseases including obesity, asthma, diabetes, cancer and cardiovascular disease (CDC, 2011b).

An estimated 13 million American adults (1 in 17) have a seriously debilitating mental illness (Healthy People 2020, 2013b), and only about 17 percent are considered to be in a state of optimal mental health (CDC, 2011b).

Psychological Distress and Taking Medication for Mental Health Problems (By Gender)

A higher proportion of females in Area B (14.0%) experienced severe psychological distress during the past 12 months than females in Harris County (10.1%). Female residents in Area B reported they had severe psychological distress three times as often as male residents in Area B. Fewer men in both Area B and Harris County (7.6% and 7.7% respectively) are taking medication for mental health problems as compared to females (12.6% and 12.4% respectively).

When asked “Do you feel you might need to see a healthcare professional for problems with mental health, emotions, nerves, or use of alcohol or drugs in the past 12 months”, approximately 12 percent of males and 15.4 percent of females in Area B responded yes, compared to males (13.4%) and females (19.5%) in Harris County. However, in both Area B and Harris County, fewer residents reported having visited a healthcare professional for these types of problems.

Data Source: HHS, 2010
Quality of Life

General Satisfaction with Life

Quality of Life (QOL) is a multi-dimensional concept that includes domains of physical and psychological health, social relationships, and environment.

Similar to the City of Houston, the majority of residents in Area B (90.3%) reported being either satisfied or very satisfied with life.

General Health Status

"Fair to Poor" (By Age Group)

In Area B, the highest percentage of residents reporting fair to poor general health from 2008 to 2010 were 45 to 64 years old.

A lower proportion of residents in Area B between 18 to 44 year old reported fair to poor general health compared to those 18 to 44 years old in the City of Houston (12.7%).

Lack of Social and Emotional Support

In Area B, a higher proportion of Hispanics reported either rarely or never having social or emotional support, as compared to other racial/ethnic groups.

A lower proportion of White residents in Area B reported a lack of social and emotional support (4.0%) compared to Whites in the City of Houston (7.3%).

Racial/ethnic differences in certain estimates of mental health and quality of life may not reflect the true picture. Many first generation immigrants understand these survey questions differently from native born Americans due to many reasons.

Data Source: BRFSS, 2008-2010
Summary

• In Area B, the prevalence of both coronary heart disease and stroke were higher compared to the City and County. Prevalence of heart attack in Area B was comparable with the City and County.

• Area B has higher prevalence of high blood pressure compared to the City of Houston and Harris County.

• More than half of the Area B residents between the ages of 45 to 64 were obese.

• Rates of reportable STDs, such as chlamydia, gonorrhea, and syphilis are higher in Area B than the rest of Houston/Harris County.

• In 2010, the rate of HIV infection was 762.4 per 100,000 and in 2011, the rate of newly diagnosed cases of HIV infections in Area B (incidence) was 56.0 per 100,000.

• A majority of residents reported being either satisfied or very satisfied with their lives.

• Of those who reported poorer mental health status, women appear to experience more episodes of severe psychological distress (approximately 14%) than men, but fewer women are taking medication for mental health problems (12.6%).

• Higher proportions of residents in Area B reported that their general health was fair to poor than in the City of Houston.
Recommendations

At the Individual level:

- Reduce modifiable risk factors to avoid developing chronic heart disease.
- Promote bystander cardiopulmonary resuscitation (CPR) to prevent cardiovascular arrests.
- Adhere to a regular annual physical exam to ensure wellness and good health.
- Take preventive measures to help prevent diabetes by maintaining a normal blood glucose level, eating healthily, remaining physically active, regularly monitoring blood pressure and cholesterol levels, and regularly screening for diabetes (CDC, 2012a).
- The risk of heart attacks and strokes can be lowered by making healthy lifestyle choices in diet and exercise, and by taking prescribed medication (Center for Disease Control and Prevention, 2013b).
- Providers and local organizations should realign health care services targeting identified health conditions as priority issues.

At Organizational level:

- Agencies may integrate services across mental health and physical health services to improve access and earlier intervention.
- Increase use of evidence-based chronic disease education in culturally diverse settings used by residents.

At the Policy Level:

Strategic approaches should be developed and implemented to address health conditions such as obesity, high blood pressure and diabetes by:

- Enhancing opportunities to access healthy food choices.
- Improving food item options to make the healthy choice the easier choice.
- Improving public safety and creating opportunities to be more active at schools, parks, community centers, work sites.
- Improving access to screenings and education.
- Increase availability of mental health services for low income residents.
- Promoting community design that provides opportunities for healthy eating and active living.
- Promoting “health in all policies”, a collaborative approach that integrates and articulates health considerations into policy making across sectors, and at all levels, to improve the health of all communities and people.
Health Behaviors

- HIV Screening
- Cancer Screening
- Smoking
- Alcohol
- Fruits and Vegetables/ Physical Activity
HIV Screening

Health screenings are tests that look for diseases before there are symptoms, and can find diseases early when they are easier to treat (Medline Plus, 2013a). Increasing HIV screening can help foster earlier detection of HIV infection, identify and counsel persons with unrecognized HIV infection, link them to clinical and prevention services, and further reduce perinatal transmission of HIV (CDC, 2006).

Residents in Area B (27.1%) reported receiving an HIV screening more often than those in Harris County (23%).

The most common reasons for not getting an HIV test in Area B were 1) Most felt they had not been exposed to HIV (56%), 2) Other or multiple reasons (14.6%), 3) Some felt testing was unnecessary (10.6%).

A total of 15.2% of residents in Area B reported access, associated cost, or feeling it unnecessary as barriers to HIV testing, compared to a total of 13.6% of residents reporting these reasons in Harris County.

During 2010, most adults in Area B and Harris County did not receive an HIV screening (72.9% vs. 77.0%). According to a recent CDC analysis, the proportion of adults who had ever been tested for HIV increased from 37 percent in 2000 to 45 percent in 2010.

Reasons Never Tested for HIV

Data Source: HHS, 2010
**Breast cancer**

Breast cancer occurs when abnormal cell growth forms in the breast tissue that can invade surrounding tissues or spread to other areas of the body. Nationally, 211,731 women were diagnosed with breast cancer, and there were 40,676 related deaths from the disease in 2009 (CDC, 2013f). The age adjusted cancer mortality rate in Harris County from 2006-2010 due to breast cancer was in the range of 11.8-14.2 per 100,000 population (Texas Cancer Registry [TCR], 2013). White women are slightly more likely to develop breast cancer than African American, Hispanic, and Asian women. But African American women are more likely to develop more aggressive, more advanced-stage breast cancer that is diagnosed at a younger age. African American women are also more likely to die from breast cancer. Some of these differences in outcomes may be due to less access to mammography and lower quality medical care, as well as various lifestyle patterns (eating habits and weight issues for example) that are more common in some ethnic groups than in others (Breast Cancer, 2014).

**Colorectal Cancer**

Colorectal cancer refers to colon cancer, cancer of the large intestine (colon), and rectal cancer which occurs at the end of the colon (Mayo Clinic, 2011b). It accounts for nine percent of all cancer incidences (new cases) (Haggar & Boushey, 2009), and is the third leading cause of cancer deaths among men and women (American Cancer Society, 2011). In 2009, there were 136,717 colorectal cancer diagnoses and 51,848 deaths in the U.S. (CDC, 2012i). In 2013, it was estimated that there were 102,480 new cases of colon cancer and 40,340 new cases of rectal cancer (American Cancer Society, 2012). The age adjusted cancer mortality rate in Harris County from 2006-2010 due to colorectal cancer was in the range of 11.2-13.7 per 100,000 population (TCR, 2013).

**Cervical Cancer**

All women are at risk for cervical cancer, which is a type of cancer that occurs in the cells of a woman’s cervix. It is prevalent in women over age 30 and the most common cause of the disease is the human papillomavirus (HPV) (CDC, 2012h). Every year about 12,000 women in the United States get cervical cancer (CDC, 2012h). In 2013, there have already been 12,340 new cases of cervical cancer and 4,030 related deaths (National Cancer Institute, n.d.). The age adjusted cancer mortality rate in Harris County from 2006-2010 due to cervical cancer was in the range of 2.4-3.4 per 100,000 population (TCR, 2013).

### Cancer Screenings

<table>
<thead>
<tr>
<th>Cancer Type</th>
<th>Area B</th>
<th>Harris County</th>
</tr>
</thead>
<tbody>
<tr>
<td>Breast Cancer</td>
<td>63.1%</td>
<td>64.0%</td>
</tr>
<tr>
<td>Cervical Cancer</td>
<td>78.7%</td>
<td>80.4%</td>
</tr>
<tr>
<td>Colon Cancer</td>
<td>55.9%</td>
<td>58.0%</td>
</tr>
</tbody>
</table>

The proportions of reported screenings for cervical cancer among women 21 years and older, for breast cancer among women 40 to 74 years older, and for colorectal cancer among 50 years and older were slightly lower among Area B residents than Harris County.

Data Source: HHS, 2010
Smoking

Individuals who smoke cigarettes and are exposed to tobacco smoke (second-hand) are at risk of premature death from chronic diseases such as lung cancer, ischemic heart disease and chronic obstructive pulmonary disease. National data show 90 percent of lung cancer cases result from cigarette smoking. Every year about 3,000 non-smokers die from lung cancer due to secondhand smoke in the United States. Smoking avoidance and cessation programs are two important measures to reduce the risk of developing lung cancer (CDC, 2013c).

Altogether, have you smoked at least 100 or more cigarettes in your entire lifetime?

In Area B, more adults (40.2%) reported that they had smoked at least 100 or more cigarettes in their entire lifetime than those in Harris County (37.2%). Among those in Area B who had smoked at least 100 cigarettes in their lifetime, 29.0 percent reported that they smoke every day, and 20.9 percent reported that they smoke some days compared to 29.2 percent and 15.9 percent respectively in Harris County.

Do you now smoke cigarettes every day, some days, or not at all?

Data Source: HHS, 2010
Alcohol Consumption

Excessive alcohol use can increase the risk of health problems such as injuries, violence, liver diseases, and cancer. Binge drinking is a common form of excessive alcohol use in the U.S., and refers to consuming five or more alcoholic beverages for men and four or more for women within about two hours (CDC, 2012b). According to the 2010 Dietary Guidelines for Americans, a moderate level of alcohol consumption per day is one drink for women and two drinks for men (Mayo Clinic, 2011a).

Residents in Area B consumed a larger number of alcoholic drinks during the past 30 days when they drank, and a larger number of alcoholic drinks on any given occasion than those in the City of Houston.

Note: There may be a tendency to respond to questions on alcohol consumption and other sensitive areas in a socially desirable manner. This may result in possible underreporting and thus, underestimation of these estimates.

Examples of one drink include (Mayo Clinic, 2011a):

<table>

</tr>
<tr>
<td>Shot of Distilled Spirits or Liquor</td>
<td>1.5</td>
</tr>
</tbody>
</table>

Data Source: BRFSS, 2008-2010
Fruit/Vegetable Consumption and Physical Activity

Diets rich in fruits and vegetables provide essential vitamins and minerals, may reduce the risk of cancer and help protect against other chronic diseases (CDC, 2012g). Two cups of fruits and 2½ cups of vegetables per day are recommended for a 2,000 calorie intake (U.S. Department of Health and Human Services and U.S. Department of Agriculture, 2005).

Area B and the City of Houston have similar patterns of daily fruit and vegetable intake and levels of physical activity. Most adults consume less than five servings of fruits and vegetables a day and do not meet the recommended level of moderate or vigorous physical activity. Only 22.7 percent of adults in Area B are meeting nutritional guidelines for fruits and vegetable intake compared to 21.0 percent in the City of Houston. Less than half of Area B residents (40.1%) are meeting recommended levels of physical activity compared to 43.5 percent in the City of Houston.

Regular physical activity can improve overall health and fitness, and can reduce the risk of many chronic diseases (CDC, 2011c). It is recommended that adults engage in 150 minutes of moderate-intensity or 75 minutes of vigorous aerobic physical activity every week (CDC, 2011c).

Area B and the City of Houston have similar patterns of daily fruit and vegetable intake and levels of physical activity. Most adults consume less than five servings of fruits and vegetables a day and do not meet the recommended level of moderate or vigorous physical activity. Only 22.7 percent of adults in Area B are meeting nutritional guidelines for fruits and vegetable intake compared to 21.0 percent in the City of Houston. Less than half of Area B residents (40.1%) are meeting recommended levels of physical activity compared to 43.5 percent in the City of Houston.

Recommendations for Moderate or Vigorous Physical Activity for Area B

Data Source: BRFSS, 2008-2010
Summary

- HIV testing in Area B was low during 2010; only 27.1 percent of adults received a screening for HIV. The most common reason for not getting tested was that the residents felt they had not been exposed to HIV.

- More than 50 percent of residents (50 years and older) reported screening for colon cancer.

- Almost two-thirds of female residents reported adherence to screening guidelines for breast cancer, and about 79 percent of female residents reported screening for cervical cancer.

- Approximately 40 percent of residents had smoked at least 100 cigarettes in their entire lifetime, and approximately 29 percent of those reported smoking cigarettes every day during 2010.

- On occasions when individuals had an alcoholic beverage, an average of about two and a half drinks were consumed. The largest number of drinks consumed on any single occasion was about four.

- Only 22.7 of residents met nutritional guidelines for fruits and vegetables consumption and less than half of population met recommended levels for physical activity.
Recommendations

At the Individual level:

- Increase uptake and adherence to recommended screening behaviors.
- With average risk, colon cancer screening can begin at age 50, and with an increased risk, screening should begin sooner (Mayo Clinic, 2011c).
- Women between the ages of 21 and 65 years old should have regular Pap smear tests to screen for cervical cancer (CDC, 2012j).
- Regular clinical breast exams for women 20 to 39 years of age and annual mammogram screenings for women age 40 and older are recommended (Susan G. Komen, 2012).
- It is recommended that adolescents and adults ages 15 to 65 years old, those who are at increased risk, and all pregnant women be tested for HIV infection (United States Preventive Service Task Force, 2013).
- Adopt more healthy behaviors such as staying physically active and eating healthily, and avoid unhealthy behaviors such as excessive alcohol use.

At Organizational level:

- Design and implement appropriate evidence-based programs and interventions to address alcohol abuse problems. Cultural differences need to be considered when developing evidence-based programs.
- Engage community institutions and trusted communication channels in changing health behaviors.
- Promote more community gardens, farmers markets and mobile produce markets to increase availability of fresh fruits and vegetables.
- Align preventive services and health literacy programs to promote screening behaviors, healthy eating and more active lifestyles.
- Conduct outreach to the uninsured to develop strategies to defray the cost of screening.
- Conduct more educational and awareness programs so that communities are aware of the available preventive and screening services.

At the Policy Level:

- Align resources and strategies through community centers and work sites to promote behaviors such as healthy eating, active living and screening. The service integration will benefit various health conditions including early cancer detection which are likely responsible for the burden of disability among this population.
- Support the Community Transformation Initiative to improve Houston/Harris County health in its promotion of “health in all policies”.
Other Factors that Affect Health

- Environmental Health
- Crime
- Teen Sexual Activity and Contraceptive Use
- Maternal and Child Health
- Infant Mortality
Environmental Health

Water Pollution

Water pollution occurs when chemicals or other foreign substances contaminate our waterways. Contaminated surface water (water from bayous, lakes, rivers, and streams) and contaminated groundwater can adversely affect human health and the environment. (National Institute of Environmental Health Sciences [NIH], 2013). Pollutants can hamper the ability of a waterway to sustain aquatic life and can cause odor and taste problems in drinking water.

**Harmful Effects:** High levels of bacteria can be harmful to people. Their presence can indicate the existence of fecal matter or other waterborne pathogens. According to the U.S. Department of Health and Human Services, effects of exposure may include: vomiting or diarrhea, skin rash, some cancers, reproductive and developmental problems (U.S. Department of Health and Human Services, 2010).

**Contributing Pollutants:** Fertilizers and pesticides from agricultural runoff; sewage and food processing waste; lead, mercury, and other heavy metals; chemical wastes from industrial discharges; and chemical contamination from hazardous waste sites (NIH, 2013).

**Environment-Related Problems in the Community**

- Heavily developed residential and commercial areas surround the water bodies in Area B.
- High bacterial levels, elevated nutrients, and low dissolved oxygen levels are of great concern for water bodies within Area B. Waterborne pathogens present in surface water may pose health risks to humans. In addition, high nutrient concentrations and low dissolved oxygen levels can pose threats to aquatic life and other organisms within the ecosystem.
- Source of bacteria contamination in Area B may include wastewater treatment plant effluent with inadequate treatment, sanitary sewer system overflows, runoff from on-site sewage facilities and runoff contaminated with waste from pets, wildlife, and livestock (Houston-Galveston Area Council Basin Highlights Report, 2013).
- Elevated nutrients may come from the same sources as the bacteria plus runoff from fertilized lawns, golf courses, sports fields, landscaped areas, and timber harvested land (Houston-Galveston Area Council Basin Highlights Report, 2013).

Information Source: Bureau of Pollution Control and Prevention/HDHHS, 2010

### Percentage of residents with concerns for Area B

<table>

</tbody>
</table>

*In spite of the polluted surface water and waterways, the City of Houston drinking water is tested and safe to drink.

Water pollutants and dumping waste were more of concern for residents in Area B than those in Harris County. Particularly, residents were concerned about water contamination caused from harmful chemicals and run-off, drinking water that had an odd look, odor, or taste, and the dumping of waste in empty lots or ditches.

Data Source: HHS, 2010
Environmental Health

Air Pollution

Air pollution can have severe adverse effects on the overall health of the community. Out-of-hospital cardiac arrest (McNally et al., 2011) is a health effect associated with short-term exposure to air pollutants, including ozone and particulate matter (Ensor, Raun, & Persse, 2013), which have been among the triggers associated with cardiac arrest. Approximately 300,000 people in the United States experience an out-of-hospital cardiac arrest each year and over 90 percent of those cases result in death. The risk of cardiac arrest increases with a 20 parts per billion (ppb) increase in ozone three hours before the cardiac arrest event (EPA, 2006). Similar findings of increased risk of cardiac arrest were found for an increase of 6 μg/m3 particulate matter (PM2.5) one to two days before the cardiac arrest event (EPA, 2005). Risk of cardiac arrest is higher in the summer and among African Americans, males, and those over 64 years in age. Air pollution is also a trigger for asthma events.

Most Frequent Type of 311 Air Pollution Complaints for Area B

In 2012, 25.0% of the City of Houston “air pollution” complaints (received through calls to the City of Houston 311 telephone line) were from Area B. The most frequent types of air pollution complaints in 2012 were odor (52.0%), followed by dust (23.0%), and other (11.0%).

According to the Health of Houston Survey (2010), a higher proportion of residents in Area B reported that fumes from traffic (20.8%) were environmental-related problems in their community compared to those in Harris County (17.2%). However, a higher proportion of Harris County residents (14.8%) felt industry fumes were more of a concern than residents in Area B (11.4%).

Car emissions, manufacturing of chemicals, burning coal, oil, and other fossil fuels, dust, pollen and mold spores are some of the contributing factors of air pollution (Medline Plus, 2013b).

The U.S. Environmental Protection Agency (EPA) National Ambient Air Quality Standard (NAAQS) for 8-hour ozone concentration is 75 ppb (EPA, 2012b). During 2012, the air in Area B show more pollution than allowed by the national standards in three of the air monitoring stations in or near Area B: Lang, Houston Aldine, and Houston East (TCEQ, 2013).

Data Source: Bureau of Pollution Control and Prevention/HDHHS, 2010
The Environmental Protection Agency (EPA) and the Texas Commission on Environmental Quality (TCEQ) administer programs which monitor and regulate facilities with the potential to release significant amounts of hazardous chemicals into the environment. Chemical emissions and waste released into the environment can affect everyone. Awareness of regulated site locations and pollutant types may help residents to better understand the environmental hazards present in their community.

“A superfund site is an uncontrolled or abandoned place where hazardous waste is located, that can affect local eco-systems” (EPA, 2012a). There are 12 superfund sites within the Houston city limits, nine of which are on the National Priorities List (NPL). There are five superfund sites in Area B, three of which are on the NPL.

“TRI tracks the management of toxic chemicals emitted to the air or water, or placed in some type of land disposal that pose a threat to human health and the environment” (EPA, 2013). There are 150 Toxic Release Inventory (TRI) sites within the Houston city limits; 41 of these are located in Area B.

Data Source: TCEQ, 2010 and EPA, 2012-2013
Crime

Crime is a public health issue that can have negative effects on physical health. By the end of 2012, the leading type of criminal offense in Area B was theft, occurring at a rate of 33.0 per 1,000 population which was comparable to the City of Houston’s rate of 32.7 per 1,000 population. In Area B and the City of Houston, rates of theft were more than double the rates of burglary, and occurred five times more often than aggregated assault, and robbery. The rates of murders and rapes were similar for the City of Houston and Area B (0.1 and 0.3 per 1,000 population respectively, not shown above).

According to the Bureau of Justice Statistics, in the past 17 years, the U.S. burglary rate decreased 56.0 percent and there were 27.6 victimizations per 1,000 households (Walters, Moore, & Berzofsky, 2013). Roughly, the national rate of robbery is about 1.3 per 1,000 population, aggravated assault is 2.5 per 1,000 population, and the rate of theft is 20.1 per 1,000 population (The Federal Bureau of Investigation, n.d.). Rates of aggravated assault, robbery, and theft were higher in Area B than rates in the U.S. population.

Data Source: Houston Police Department Crime Report, December 2011-November 2012
Teen Sexual Behavior and Contraceptive Use

Sexual Behaviors Among High School Students (15-19 Years Old)

According to Youth Risk Behavioral Surveillance System data (2011), a higher proportion of high school students between the ages of 15 and 19 in the City of Houston reported having sexual intercourse for the first time before the age of 13, compared to high school students in Texas. There is no significant difference between the City of Houston and Texas high school students’ responses when asked about sexual activity within the past three months.

Contraceptive Use Among High School Students (15-19 Years Old)

Approximately 41.0 percent of high school students in the City of Houston reported not using a condom during their last sexual intercourse, compared to 46.0 percent of Texas high school students. There is no significant difference between high school students in the City of Houston and Texas in terms of contraceptive use. However, high school students in the City of Houston reported higher proportions of not using any form of contraception during their last sexual intercourse as compared to Texas high school students.

Data Source: Texas YRBSS, 2011
Maternal and Child Health

Annual Average — Teen Birth Rate, 2007-2011 (per 1,000 Girls 15-19)

Nationally, the teen birth rate among girls between 15 to 19 years old declined eight percent from 34.3 births per 1,000 girls 15 to 19 years old in 2010 to 31.3 per 1,000 girls in 2011 (Hamilton, Martin, & Ventura, 2012). During 2007 to 2011, the annual average teen birth rate in Area B was higher than that of Harris County and Texas.

Received Early or No Prenatal Care or Prenatal Care in the 2nd or 3rd Trimester

According to the Vital Statistics Unit, Department of State Health Services, from 2007-2011, only 46.5 percent of women in Area B received recommended early prenatal care in the first trimester, compared to 52.0 percent of women in Harris County. A higher percentage of women in Area B received late or no prenatal care than those in Harris County (48.1% vs. 42.0%). The Healthy People 2020 goal is that at least 77.9 percent of females delivering a live birth received prenatal care beginning in the first trimester [Healthy People 2020, Objective 10.1] (Healthy People 2020, 2013c).

Data Source: Vital Statistics Unit, Center for Health Statistics, Texas, DSHS, 2007-2011
Maternal and Child Health

Low Birth Weight and Preterm Deliveries, 2007–2011

According to the Texas Vital Statistics Unit, Center for Health Statistics, low birth weight babies weigh less than 2,500 grams at birth. In Area B, low birth weight babies represented 9.4 percent of all births. Preterm births are defined as births at less than 37 weeks. In Area B, 13.3 percent of all births were preterm, as compared to 13.1 percent of births in Harris County.

Low Birth Weight and Preterm Deliveries By Race/Ethnicity

Blacks had higher proportions of low birth weight babies and preterm births in Area B compared with Whites and Hispanics.

Data Source: Vital Statistics Unit, Center for Health Statistics, Texas, DSHS, 2007-2011

Immunization Series Completion Among Daycares, 2012-2013

Note:
1. Series completion percentages were calculated by dividing the number of children who were up to date with their vaccines by the total number of children at the daycare during the time of assessment.
2. Age-specific antigens were taken into account, so only children that should have had the vaccine were counted.
3. Shot records of children in Harris County’s daycares were reviewed for the following vaccines: Hepatitis B, Hepatitis A, Varicella, DTap (Diptheria, Tetanus, Pertussis), MMR (Measles, Mumps, Rubella), Polio, Hib (Haemophilus Influenza Type B) and PCV (Pneumococcal conjugate).

Immunization series completion among children in daycare settings in Area B (83.5%) was comparable with that in Harris County (81.5%).

Data Source: Bureau of Immunization/HDHHS, 2012-2013
Infant Mortality

</table>

The Healthy People (HP) 2020 target is to reduce infant mortality to 6.0 deaths per 1,000 live births (Healthy People 2020, 2013d).

A higher infant mortality rate was found in Area B than Harris County.

Similar to the City of Houston, infant mortality rate was higher among Blacks in Area B as compared to other racial/ethnic groups.

Infant mortality rates are highest in ZIP code 77026 which includes the following neighborhoods: Greater Fifth Ward, Kashmere Gardens, Eastex-Jensen Area, Trinity/ Houston Gardens, and Near Northside.

Data Source: Vital Statistics Unit, Center for Health Statistics, Texas, DSHS, 2007-2011
Summary and Recommendations

Summary

• Air pollution from fumes, odors, and traffic and industry smoke are reported environmental concerns for residents.

• Water pollution (chemical contamination, run-off, and the look, taste, and odor of drinking water) and the dumping of waste are some of the other environmental concerns residents have.

• Currently there are five superfund sites in the area and three of them are on the NPL.

• Crime is also a concern in Area B and the leading type of criminal offense is theft (33.0 per 1,000 population).

• Reports from students 15 to 19 years old in the City of Houston found that a high proportion had their first sexual intercourse encounter before the age of 13 and approximately 24 percent did not use a contraceptive during their last sexual encounter.

• The teen birth rate among girls 15 to 19 years old is higher in Area B than that of Harris County and national average.

• About 46 percent of pregnant women received prenatal care in the first trimester, and approximately 13 percent of all births were preterm.

• Approximately 83 percent of children in daycare completed their immunization series.

• The current infant mortality rate in Area B is 7.9 per 1,000 live births.

• Blacks have higher proportions of low birth weight babies, preterm births, and infant mortality.

Recommendations

• Increase knowledge and awareness of environmental hazards and the harmful effects of air pollution and water contamination.

• Ensure facilities are practicing source reducing approaches to prevent pollution and reduce toxic chemical and pesticides release in the environment.

• Educate youth on safe sex practices and the consequences of teenage pregnancy.

• Enforce regulatory programs that address environmental issues within the community.

• Facilitate the implementation of more efficient training on safety for workers.

• Promote evidence-based education on teen pregnancy, contraception use, and prenatal care.

• Introduce evidence-based strategies that promote early prenatal care.

• Implement evidence-based programs to address birth outcomes among Blacks.

• Implement evidence-based youth violence prevention programs.

• Examine the possibility of expanding lessons learned from STRYVE project.
Initiatives and Programs in Area B

After School Programs

Fifth Ward Multi-Service Center

- **Fifth Ward Enrichment Program** - is designed to empower boys to become responsible and productive men for their families and their community. The program’s objectives are to keep youth off the streets, deter gang activity, prevent/deter chemical dependency, help prevent teen pregnancy, help youth become productive members of the workforce, promote future employability, help students stay enrolled and complete high school and provide a process for youth to build positive self images.

- **YMCA Success by Six Program** - provides quality support services to families and young mothers with children from birth to 6 years of age. The objective of this program is to strengthen parenting by offering: Parenting classes, Anger Management, Domestic Violence, Basic Substance Abuse and One-On-One Counseling to promote school readiness, positive education and self-sufficiency.

Acres Home Multi-Service Center

- **Change Happens (Rescue Youth Program)** - offers after school and summer activities for youth ages 6-17.

Kashmere Multi-Service Center

- **Association for the People and the Community (APC):** The Association for the People and the Community is a 501(c) (3) nonprofit organization dedicated to educating youth through after school programming. The A.P.C.’s mission is to build an intelligent, confident and proactive community.

Head Start Programs

Head Start is a federally funded program that provides comprehensives services to low-income children ages 3-5 and their families. Its aim is to prepare children for success in schools through an early learning program. Children who attend Head Start engage in various educational activities. They also receive free healthy meals and snacks, and enjoy playing indoors/outdoors in a safe setting.

**Harris County Department of Education** — Services low income children that are ages 3 or 4 by September 1st of the program year. Program offers integrated and interdisciplinary services that focus on the whole child as well as the family. The program also provides early education, childhood development, health services, nutrition services, mental wellness services, family services, and special services for children with disabilities. This service is available at both Northeast Multi-Service Center and Fifth Ward Multi-Service Center.

Acres Home Multi-Service Center

- **Avance Houston** — Services low income children that are ages 3 or 4 by September 1st of the program year. Program offers integrated and interdisciplinary services that focus on the whole child as well as the family. The program also provides early education, childhood development, health services, nutrition services, mental wellness services, family services, and special services for children with disabilities.

Senior Programs

- **Aging and Disability Resources Center:** Specializes in locating both private and public services and offering options counseling for older adults and individuals with disabilities of all ages. Care Connection is a free service targeting residents of these Texas counties: Austin, Brazoria, Chambers, Colorado, Fort Bend, Galveston, Harris, Liberty, Matagorda, Montgomery, Walker, Waller and Wharton. This service is offered at Kashmere Multi-Service Center.

- **Neighborhood Centers Inc. (NCI) Senior Program:** Provides meals on-site, which is funded by AAA, to seniors over 60. It includes social services, exercise, nutrition education and other programming to keep the senior population fit physically, mentally and emotionally. This program is offered at Kashmere Multi-Service Center; Acres Home Multi-Service Center; and Fifth Ward Multi-Service Center/Peavy Center.

- **Area Agency on Aging Senior Program:** Area Agency on Aging provides support through partnerships with area providers. These agencies provide advice, information and services that will assist older individuals and caregivers in their role of caring for an elderly family member or elderly recipient. Providers include professionals who care and recognize special needs and provide direct services and referrals. The Area Agency on Aging Caregivers Resources library provider a designated section where extensive literature on topics of interest to caregivers can be found. This program is offered at Northeast Multi-Service Center.
Initiatives and Programs in Area B

**Senior Fitness Center:** Seniors can participate in health and fitness programs staffed by professionals and paraprofessionals from Neighborhood Centers and Prairie View College Nursing Students. Staff has expertise or receiving training to work with older adults in a fitness setting. Fitness centers are equipped with state of the art, senior friendly equipment designed to help older adults improve strength and flexibility and maintain optimal fitness despite any associated conditions. Services offered at the Fifth Ward-JW Peavy Center.

**Fifth Ward Multi-Service Center/Peavy Center**

**Sip and Surf Internet Café:** Offers internet access while seniors have the opportunity to enjoy coffee and snacks.

---

**Ex-Offender Programs**

**Kashmere Multi-Service Center**

**Community Re-Entry Network:** Provides programmatic resources for the ex-offender through life skill classes, case management and referrals to other providers to assist with bridging the transition from prison to the community.

---

**Women and Children’s Health**

**Acres Home Multi-Service Center**

**Nurse Family Partnership:** Home visitation services and case management are offered to first time mothers.

**(SOIFA) Sisterhood of Faith in Action:** Provides information and counseling services to youth, prenatal education, family literacy, and general health information to women.

**WIC:** Women Infants and Children (WIC) is a special supplemental nutrition program which provides health care referrals, nutritional education, and nutritious foods to pregnant, breast-feeding and postpartum women, to children under five who have nutrition health-related problems. This program is also offered at Northeast Multi-Service Center and Northside Health Center.

**Northeast Multi-Service Center**

**Cradles Project:** Free parenting classes designed to provide information and allow participants to share experiences with other participants.

**The Council on Alcohol and Drugs (Houston):** Group support program for recovering alcoholics and drug addiction.

**MHMRA (Mental Health Mental Retardation)- Infant Program:** Provides infant stimulation to help young children who show delay in development to reach their fullest potential by conducting home visits for parents and children.

**Northside Health Center**

**Mammogram Screening and Education:** Project VALET-M.D. Anderson Cancer Screening & Houston Department of Health and Human Services work together to provide mammogram screenings and education to the Northside community.

**Kid’s Village:** Builds on existing services to create an integrated delivery system that improves the health and well being of children. Program is also designed to address the needs of persons from vulnerable populations by producing services and support through involved family members. Kids Village provides services in collaboration with partner agencies, and utilization of informal supports. This program offered at Northside Health Center.

**MHMRA:** Offers counseling services in partnership with our Kids Village program for children to age 18.

---

**Economic/ Workforce Development**

**Acres Home Multi-Service Center**

**Acres Homes Community Development Corporation:** Provides information and assistance to homebuyers. Provides first time home buyer counseling classes and financial literacy.

**Fifth Ward Multi-Service Center**

**(AHEC) Greater Houston Area Health Education Center:** Provides job training and workforce development.

---

**Education/Training**

**GED Classes:** Continuing education is offered to all adults interested. This service is provided in the Northeast Multi-Service Center; Kashmere Multi-Service Center and Acres Home Multi-Service Center.
Initiatives and Programs in Area B

Northeast Multi-Service Center

♦ Computer Literacy: This program provides students with knowledge of basic computer skills. Up-to-date information, curriculum study, and software are provided to prepare students for employment, home management, and research resources.

Acres Home Multi-Service Center

♦ Harris County Juvenile Probation Services -Focus on Youth: Juvenile Supervision for Youth and Families.

Food Assistance

♦ Food Bank Distributions: Houston Food Bank provides application and submission assistance for SNAP, Medicaid, and TANF benefits. SNAP (EBT) card are also given on site. This service is provided at the Acres Home Multi-Service Center and Fifth Ward Multi-Service Center.

Northeast Multi-Service Center

♦ Target Hunger Site Program: Target Hunger-Food Pantry.

Kashmere Multi-Service Center

♦ Target Hunger Educational Food Fair

Fitness

♦ ACES Fitness for Seniors: A senior fitness program designed for seniors ages 50+ that includes aerobics, muscular conditioning, along with exercises to stretch your body and promote good posture. This program is offered at Kashmere Multi-Service Center and Fifth Ward Multi-Service Center.
♦ Line Dancing for Fitness: Promotes fitness and fun for all ages through line dancing. This program is offered at Kashmere Multi-Service Center and Fifth Ward Multi-Service Center.
♦ Arthritis Foundation Exercise Program: The Arthritis Foundation Exercise Program is a community-based, recreational group exercise and education program designed specifically for people with arthritis and related diseases. The program is a series of workshops given one hour, twice a week, for eight weeks. Participants receive health education and the benefits of group exercise to reduce the pain and stiffness, increase energy, improve balance, help maintain or improve mobility, and help keep your body flexible and your muscles strong.

Acres Home Multi-Service Center

♦ Urban Line Dancing: Modern Dance Group for Adults

Additional Services

♦ Chronic Disease/Diabetes Self-Management Program: The Living a Healthy Life with Chronic Conditions evidence-based program is a series of highly interactive workshops given two and a half hours, once a week, for six weeks, in community settings such as senior centers, churches, libraries and hospitals. People with different ongoing chronic health problems such as diabetes, heart conditions, arthritis, cancer, high blood pressure, stroke, asthma, and several other long-term conditions may attend the program together. Caregivers for loved ones or friends who have a chronic condition are also welcome to attend. Workshops are facilitated by trained leaders, many whom are peers with a chronic health conditions themselves. Subjects covered include but are not limited to: 1) techniques to deal with problems such as frustration, fatigue, pain and isolation, 2) appropriate exercise for maintaining and improving strength, flexibility, and endurance, 3) appropriate use of medications, 4) communicating effectively with family, friends, and health professionals, 5) nutrition, and, 6) making informed treatment decisions. Additional training opportunities for individuals who are interested in being trained as leaders in their community to help others manage their chronic health conditions are available upon request.

♦ Male Health Services Clinic: Serves men ages 14 to 55 years old by providing male health exams, B/P check, Hepatitis B. Immunization Tdap (Tetanus, Diphtheria, Pertussis) and MMR (measles, mumps, rubella). Prostate exams are given to men 40 years or older as well as cholesterol, triglyceride, and blood glucose checks. Education on family planning methods if needed is also provided. This service is provided at Northside Health Center.
Initiatives and Programs in Area B

♦ **Family Planning:** Contraceptive education and services for women of child-bearing age are offered. Services include long and short term family planning methods.

♦ **Pregnancy Testing:** Appointments are only in the morning. Please call in advance for an appointment.

♦ **TB Screening and Treatment:** The TB (Tuberculosis) clinic provides treatment and public health follow-up for disease control. Priority patients are those clinically diagnosed as a TB Suspect, TB Case, identified contacts to a documented TB case and class B1/B2 immigrants with abnormal chest x-rays.

♦ **HIV/STD Screening and Treatment:** The STD clinic provides services to respond to the HIV/AIDS epidemic in the Houston/ Harris County area by improving our response to HIV infection and associated risk factors, preventing the spread of HIV, and maximizing health and social outcomes. We provide HIV/STD Counseling, Testing and Referral Services, Health Education/ Risk Reduction, and Risk Counseling Services.
  • **Hip Hop for HIV:** The largest city wide HIV testing event that promotes HIV awareness, education, and provides free confidential HIV and Syphilis testing to Houston’s young adults. (Annually June-July).

♦ **Hansen Disease Clinic:** The primary goal of the Hansen’s disease Program is to prevent deformity and disability from Hansen’s disease through early diagnosis and treatment.

♦ **Immunizations - Infants and Children:** Immunizations for infants and children are offered.

♦ **Dental Screening:** Dental services are available for low-income children 1 through 20 years of age who are enrolled in the CHIP, or WIC program, and who do not have Medicaid (Title XIX); Preventive dental services are provided for enrolled prenatal patients. To qualify clients need to go through a dental eligibility process.

♦ **Medicaid and CHIP assistance:** Provides Medicaid, CHIP, SNAP (food stamp) assistance. This service is offered at Acres Home Multi-Service Center and Northeast Multi-Service Center.

♦ **Care Houston:** Care Houston is a collaborative project between the Houston Fire Department (HFD) and the Houston Department of Health and Human Services (HDHHS) designed to decrease the high volume of non-emergency EMS calls. EMS identifies residents who have made more than five emergency calls in a 90-day period and forwards that information to HDHHS. Health department staff contacts the resident and if he or she agrees to participate, a Nurse Case Manager makes a home visit for in-home needs assessment, assists the resident in devising a service plan, and provides social and medical referrals, as needed.
