Request

To realign Mossy Oaks between Mossy Oaks Road and IH45 &
To add Springwoods Village Parkway between Spring Stuebner and IH45

Justification

- Alignment change for Mossy Oaks is part of an 1,800 acre planned community and all alignment changes are within that community.
- Mossy Oaks realignment allows for a better traffic grid designed to result in a community with all major roadways functioning at LOS “C” or better.
- Springwoods Village Parkway is a major traffic route for the planned community looping through the community linking IH45 to the Future Grand Parkway and ultimately to Spring Stuebner.
- Springwoods Village Parkway is anticipated to generate 35,000 ADT by 2025.
- Proposed changes to the MTFP will enhance local and intra-local mobility by providing the system capacities needed for the region while minimizing local impacts to congestion through off system alternatives.
- Coordination with other development in the area should provide for most of the alignment of Mossy Oaks to be dedicated between IH 45 and Gosling.

Summary/Conclusion

The realignment of Mossy Oaks will result in improved traffic patterns for the proposed new Springwoods Village Development. The extent of realignment is completely within Springwoods Village. Adding Springwoods Village Parkway as a Major Thoroughfare will help address the important role the roadway will play in the community in providing for a key link through the community between IH 45 and the Grand Parkway. This link will serve the anticipated commuters from other parts of the region that will come to work, shop and play in Springwoods Village.
