

OFFICE OF THE CITY CONTROLLER
CITY OF HOUSTON
TEXAS

RONALD C. GREEN

To: Mayor Annise D. Parker
City Council Members

From: Ronald C. Green
City Controller

Date: November 6, 2015

Subject: September 2015
Financial Report

Attached is the Monthly Financial Report for the period ending September 30, 2015.

GENERAL FUND

The Controller's Office is projecting an ending fund balance of \$152.9 million for FY2016. This is \$56.8 million lower than the projection of the Finance Department. The difference is due to a \$56.8 million higher revenue projection from the Finance Department. Based on our current projections, the fund balance will be \$1.0 million **below** the City's target of holding 7.5% of total expenditures, excluding debt service and Pay As You Go (PAYGO), in reserve. Please remember the FY2015 Ending Fund Balance as shown is a draft until completion of the year-end audit.

We have decreased our revenue projection \$41.7 million from our August projection. Our projection for Sales Tax decreased \$41.7 million to recognize the expected impact of lower oil prices and the downturn in the local economy. Our projection of \$629.2 million is based on Dr. Gilmer's most recent Sales Tax projection, using his Scenario 2 amount. The report was e-mailed to you last week. The August receipt was 2.21% below the same month prior year receipt, and September was 2.18% below last year.

The major differences are in three categories:

- (1) Industrial Assessments is \$1.2 million lower, as Controller's Office is using a lower valuation and collection rate than Finance.
- (2) Sales Tax is \$49.9 million lower, as Controller's Office is projecting negative growth for FY2016.
- (3) Miscellaneous/Other is \$2.3 million lower, as Controller's Office is projecting lower one-time revenue receipts.

Expenditure projections were increased \$1.2 million primarily to reflect an increase in the City Council projection for savings carried over from FY2015 in their District Services Funds, as well as their savings from their operating budgets, moved to various other departments.

ENTERPRISE FUNDS

In the Aviation Operating Fund, we have increased our projection for Operating Expenses \$1.8 million for increased land and ground maintenance costs. We also increased Non-Operating Revenues \$573,000 for sale of land and prior year revenues. These changes caused Operating Transfers to decrease \$1.2 million.

Finally, our projection for the Combined Utility System Operating Fund Operating Expenses decreased \$1.8 million in personnel, reflecting delays in filling vacant positions.

**Mayor Annise D. Parker
City Council Members
September Monthly Financial Report**

We are currently projecting no material changes in the Convention & Entertainment Operating Fund, Dedicated Drainage & Street Renewal Fund, and the Storm Water Fund this month.

COMMERCIAL PAPER AND BONDS

The City's practice has been to maintain no more than 20% of the total outstanding debt for each type of debt in a variable rate structure. As of September 30, 2015, the ratio of unhedged variable rate debt for each type of outstanding debt was:

General Obligation	4.88%
Combined Utility System	1.92%
Aviation	14.39%
Convention and Entertainment	12.07%

Respectfully submitted,

Ronald C. Green
City Controller

City of Houston, Texas
Quarterly Swap Agreements Disclosure
September 30, 2015

I. Combined Utility System Swaps

A. Combined Utility System Synthetic Fixed Rate Swap

On September 10, 2004 the City entered into three pay-fixed, receive-variable rate swap agreements (“the 2004B Swaps”) related to the Combined Utility System 2004B auction rate variable interest bonds (“the 2004B Bonds”). The City pre-qualified six firms to submit competitive bids on the swaps. The three firms selected all matched the lowest fixed rate bid of 3.78%. As of August 15, 2012 the City had converted all of the 2004B bonds from auction rate to variable rate demand bonds (“the 2004B bonds”) and SIFMA-Index notes (“the 2012A and 2012B Refunding Bonds”), collectively referred to herein as the “Bonds.”

Objective. The objective of the swaps is to hedge against the potential of rising interest rates associated with the Bonds and to achieve a lower fixed rate than the market rate for traditional fixed rate debt at time of issuance. The City’s goal is that its variable receipts under these swaps equal the variable payments made on the bonds, leaving the fixed payment on the swap, plus dealer and liquidity fees and the fixed spread to SIFMA, as its net interest cost.

Terms. The notional amounts of the swap agreements total \$653.3 million, the principal amount of the associated Bonds. The City’s swap agreements contain scheduled reductions to outstanding notional amounts that follow anticipated payments of principal of the Bonds in varying amounts during the years 2028 to 2034.

Under the terms of the swaps, the City will pay a fixed rate of 3.78% and receive a floating rate equal to 57.6% of One-Month US Dollar LIBOR plus 37 basis points. All agreements were effective September 10, 2004, the original date of issuance of the Bonds. The termination date is May 15, 2034.

Receipts and Payments. For the three months ended September 30, 2015, the City earned \$800,654 in swap revenue for these swaps and paid \$32,536 of interest on the underlying securities. The contractual rate for the City’s swap payment is 3.78%. The average effective rate for the 2004B bonds, including interest for the Series 2004B bonds, the City’s swap payments, and its dealer and liquidity fees, reduced by swap receipts, was 3.96%. In contrast, the comparable fixed rate the City paid on its Combined Utility System Series 2004A bonds was 5.08%.

Fair value. Because interest rates have changed, the swaps had an estimated negative fair value of \$201.3 million on September 30, 2015. This value was calculated using the zero-coupon method.

Credit risk. As of this date, the City was not exposed to credit risk because the swaps had a negative fair value. However, should interest rates change and the fair value of the swap become positive, the City would be exposed to credit risk on the swap in the amount of its fair value. If a counterparty’s credit rating falls below rating thresholds established by the agreements, collateral must be posted in varying amounts depending on the credit rating and swap fair value. No collateral has been required to date.

Counterparty	Notional Amount	Fair Value	Counterparty Credit Rating (Moody's/S&P/Fitch)
Goldman Sachs Capital Markets Inc.	\$ 353,325,000	\$ (108,867,654)	A3 /A /A+
JP Morgan Chase	150,000,000	(46,218,490)	Aa3/ A+/AA-
UBS AG	150,000,000	(46,218,490)	A1 /A/A
	<u>\$ 653,325,000</u>	<u>\$ (201,304,634)</u>	

Basis risk. The City is exposed to basis risk on the swaps because the variable payment received is based on a different taxable index from the tax-exempt rate paid by the City on the bonds. Should the relationship between taxable LIBOR and tax-exempt rates move to convergence (because of reductions in tax rates, for example), the expected cost savings may not be realized. For the three months ended September 30, 2015 the swap generated positive cash flow with the average variable rate paid on the underlying tax-exempt bonds at 0.02%, or 0.46% lower than the average 0.48% LIBOR-based rate received for the swap.

Remarketing risk. The City faces a risk that the remarketing agent will not be able to sell the variable rate demand bonds at a competitive rate each week. There is no remarketing risk associated with the SIFMA index notes until the end of the respective maturities in 2015 and 2017. Rates may vary considerably as investors shift in and out of the tax-exempt variable rate sector.

Termination risk. The City may terminate for any reason. A counterparty may terminate a swap if the City fails to perform under the terms of the contract. The City's on-going payment obligations under the swap (and to a limited extent, its termination payment obligations) are insured, and counterparties cannot terminate so long as the insurer does not fail to perform. If a swap is terminated, the associated variable-rate bonds would no longer carry synthetic fixed interest rates. Also, if the swap has a negative fair value at termination, the City would be liable to the counterparty for a payment equal to the swap's fair value.

B. Combined Utility System Forward Rate Lock/Synthetic Fixed Rate Swap

On November 1, 2005 the City priced a floating to fixed interest rate exchange agreement swap with Royal Bank of Canada ("RBC") on a forward basis. The City pre-qualified eight firms to submit competitive bids, and RBC submitted the lowest bid of 3.761%.

Objective. The City entered the swap agreement to hedge against the potential of rising interest rates and to achieve a lower fixed rate than the market rate for traditional fixed rate debt. This swap was previously assigned to the 2008A variable rate demand bonds and the 2010B SIFMA Indexed Notes. The swap is currently associated with the 2012C SIFMA Indexed Notes, which refunded the 2010 SIFMA Indexed Notes. The addition of the SIFMA-Indexed Notes diversifies the System's variable rate debt portfolio. Rates on the notes are calculated at SIFMA +60 bps, and the notes expire in 2016.

Terms. The notional amount of the swap is \$249.1 million with the underlying bonds being the Series 2012C Notes. The swap agreement contains scheduled reductions to the outstanding notional amount during the years 2028 to 2034.

Under terms of the swap, the City pays a fixed rate of 3.761% and receives a floating rate equal to 70% of One-Month US Dollar LIBOR. The agreement became effective December 3, 2007 with a termination date of May 15, 2034.

On September 16th, the counterparty was changed to Wells Fargo, with no change in terms

Receipts and Payments. For the three months ended September 30, 2015, the City earned \$84,740 swap revenue for its 2012C swap and paid \$16,241 on the underlying notes. The contractual rate for the City's swap payment is 3.761%. The average effective rate for the bonds, including the City's swap payments and a fixed component, reduced by swap receipts was 4.25%.

Fair value. Because interest rates have changed, the swap had an estimated negative fair value of \$79.7 million on September 30, 2015. This value was calculated using the zero-coupon method.

Credit risk. The City's swap policy generally requires that swap counterparties be rated double-A or better by at least one nationally recognized rating agency. As of this date, Wells Fargo Bank met this requirement with ratings of Aa2/AA-/AA. Also, under the agreement, if Wells Fargo Bank's credit rating falls below double-A, collateral

may be requested in varying amounts depending on the credit rating and swap fair value. No collateral has been required to date.

Basis risk. The City will be exposed to basis risk on the swap because the variable payment received is based on a taxable index other than the tax-exempt SIFMA based rate paid by the City on the bonds. In the future, if tax-exempt rates move to convergence with the taxable LIBOR index (because of reductions in tax rates, for example), the expected cost savings may not be realized, resulting in a higher synthetic rate. For the three months ended September 30, 2015, the average variable rate paid on the underlying tax-exempt bonds, excluding the fixed credit spread component, was 0.03%, 0.11% lower than the average 0.14% LIBOR-based rate received for the swap.

Termination risk. The City may terminate for any reason. Wells Fargo Bank may terminate a swap if the City fails to perform under the terms of the contract. The City's on-going payment obligations under the swap (and to a limited extent, its termination payment obligations) are insured, and Wells Fargo Bank cannot terminate so long as the insurer does not fail to perform. If a swap is terminated, the associated variable-rate bonds would no longer carry synthetic fixed interest rates. Also, if the swap has a negative fair value at termination, the City would be liable to the counterparty for a payment equal to the swap's fair value.
