ACTIVITY #2
RESIDENTIAL TYPOLOGIES

DESCRIPTION:
Typology 3C has a moderate degree of variation, in terms of building age and traditional development patterns. It retains a lower percentage of buildings that “contribute” to a historic district than in Typologies 3A and 3B. The lots are predominantly oriented to the East/West. Streets have a mix of those with curb & gutter and others without. Building setbacks vary (whereas type 3A & 3B have moderately consistent front yard setbacks).

Distinguishing Neighborhood Features:
- Rectilinear street grid
- Narrow street widths
- Large & deep, rectangular-shaped lots
- Alleys are present throughout

Distinguishing Site Features:
- Front yards are occasionally fenced.
- Parking varies greatly, with some alley accessed, some side driveways and some in front yards. As a result, more parked cars can be noticed in front and side yards.
- Driveways are not always present. This results in less space between buildings.
- Moderate amount of Block End Cap conditions.

Distinguishing Building Features:
- Both 1 & 2-Story houses are common.
- A moderate amount of buildings date from the period of historic significance, typically from the 1920s and into the 1940s. A moderate amount of new buildings have been constructed since the 1980s.
- Home and lot sizes vary throughout this typology. Parking in the front and rear of lots are common. Architectural styles of the buildings also varies due to the mix of new homes and modified lots.
- A few lots have been joined and redeveloped with larger homes and front parking while other lots are subdivided into smaller lots with garages and parking located in the rear.
